Project Details:

- ➢ **Project Name :** Recruitment Management System
- ➢ **Platform :** Salesforce.com
- ➢ **Role :** Salesforce Developer

Description of the Project:

Recruiting through this process enables a well defined recruiting process to manage and track progress of job openings, applicants, candidates and also send automated emails and extend and connect with your CRM . here we have created 2 particular objects Candidates and Job. In candidate object fields with there personal and information related to required job types are created. In Job objects fields regarding job description, required skills.qualifications and certification required,position for which hiring is on going and its final status is mentioned. Here we have

related both the objects through relationship fields. A relationship field is a custom field on an object record that contain a link to another record.

Roles and Responsibilities:

- Implemented various custom fields like **Picklists, custom Formula Fields, Many to Many Relationship, Lookup Relationship and Master details Relationship.**

- **Field Dependencies, Validation Rules, Workflow** and **Approval Processes** for automated business requirements like **email alerts, field updates** and assign the task.

- Involved in **field & page layout** customization for the **standard objects** like Campaigns, Leads, Accounts, Contacts, Opportunity, Cases, Reports, and Dashboards.

- Implemented **Process Builder, Approval Process, Batch Apex, Email Services, Schema Programming, Custom Setting and Custom Metadata**
  .
- Followed **Trigger Best Practices, Apex Best Practices, Apex Based Sharing Rules** and **Org-Wide Default, Sharing Rules, Manual Sharing.**

- Used **SOQL & SOSL, DML** with consideration to **Governor Limits** for data manipulation needs.
