Raipur CG 07/2016 – 11/2017

Projects :

Control home appliances using wi-fi channel

Summary : Now a days many devices are controlled by digital systems & going to be more advanced. So we are made a system, using an arduino board which can be use in personal and commercial applications . it's a user friendly , low cost and easy implementation system.

Project on intelligent traffic system

Summary : It helps in accidental cases and medical emergencies. So there should be a system in our traffic management, by which ambulance can get pass easily in rush traffic and reach on time in its destination. The main aim of this project to develop intelligent traffic system for ambulance which will reach the hospital without any problem in heavy traffic.

FOSS-Cloud Infrastructure

Summary : FOSS (Free Open Source Software) is free cloud server that is based on “Gentoo Linux” distribution FOSS-Cloud 1.3.2 version which we used, reason behind using foss-cloud are easy user interface, multi installation option like (single server, multi server ,storage) and the major thing to choose this is we create our own templates and free VDI also available that spice-client , also have set IP range and some network configuration .Good product for public and private cloud from FOSS.
