Capgemini, Mumbai

May 2018 – Sept 2020

Project: Siemens Healthineers CPQ(Tacton)

Client: Siemens.

Overview: CPQ or Configure, Price & Quote Software is a sales tool designed to help companies produce accurate and highly configured quotes making all of the complex product, pricing and business rules centralized, automatic and available in real time. CPQ directly doesn't connect to the database and hence it uses an UI interface of its MDM (Master Data Management).

Roles & Responsibilities:

- Worked on MDM technology & **Pricing** part of CPQ.
- Provided Knowledge transfer to peer members
- Handling all issues in the application with minimal support
- Understand the client requirements and execute it.
- Create, Modify & Delete existing fields and records as per CPQ requirement.
- Design and manage all the Entities of MDM for its interaction to CPQ.
- Develop new Entities according to the requirement or adding new fields to the existing entities.
- Create different types of validation rules using **Drools**.
- Debugging the code if any particular data is not reflecting in CPQ.
- Creating external API links for every entity so that it can be used by CPQ team using **JSON/Jhipster**.
- Validate the **Database using SQL queries** as per requirement.
- Reindexing the data using **Elastic Search 2.2**
- Resolve the conflicts of the code of and merging to it on one development branch
- Write **Liquibase** scripts to insert records/tables in DB using **IntelliJ IDE**
- Monitor logs in **AWS Cloudwatch** and resolve the issues
- War file creation using **Maven** and uploading on **AWS S3** bucket for deployment
- CPQ Pricing tasks to verify the retrieval of values is proper or not from MDM side

ACHIEVEMENTS

- Awarded by the Customer(Siemens) for outstanding work in the project 2 times
- Xtra Mile Award from Capgemini for Q2(Jun-Dec) 2019 period
- Microsoft Technology Associate Certified (Database Administration Fundamentals)
- Microsoft Technology Associate Certified (Networking Fundamentals)
