Technical Projects:

Past Projects

1. **Project:** BE CARE - Product development for health check up on Android & iOS platforms and the same UI on web for clients in U.S.

➤ **Period:** May 2016 - Jan 2018.

➤ **Company:** ShriSai Software Services Pvt. Ltd.

➤ **Task Area:** Requirement Analysis, Testing, and project related documentation.

➤ **Description:** The project consists of development and maintenance of product meant for health check up. This product is being developed for use across various Android O.S. platform and iOS platform. Again, the project has a web UI which acts same as the mobile app. The web UI is checked on different browsers for compatibility issues. The web is also checked for responsiveness for different resolutions apart from testing the same on Android platforms like Android Smartphones, Tablets as well as on iOS mobile devices and Apple Ipad.

The application also has client server architecture which is used by the doctors and a patient to login into the app and record several activities data on a daily basis. As a tester, my role is to test various modules of these applications.

➤ **Methods and technologies:** STLC, UFT, Regression Testing, Functional Testing, UI Testing, Compatibility Testing, Bug Tracking.

➤ **Role:** Software Tester (Main lead handling team of two members)

➤ **Responsibilities:**

1. Liaising with client for requirement gathering.
2. Analysis of functional designs, requirements for development of test plans.
3. Carrying out manual testing for various modules of the product as per test plan.
4. Involved in integration testing.
5. Undertaking different review processes as per the quality goals of project and organization.
6. Collaborating with the Front office and client for clarifications.
7. Coordination of induction and knowledge transfer for new team members.
8. Providing timely data to managers for maintaining all project related matrices and providing data for project management activities.

2. Project: NexAEI - Product development for app and web

- **Period:** May 2018 – Aug 2019.
- **Company:** Nexval Infotech Pvt.Ltd.
- **Task Area:** Requirement Analysis, Web Testing Mobile App (Android & iOS) Testing, Appium and IPOC documentation.
- **Description:** NexAEI is a Smart Cloud-based Employee, Visitor and Material tracking mobile app which is geared to enrich employee engagement, automate front office operations, and transform employee experience within your organization.

The three modules are:

- i) Employee In/Out Workflow (EIO),
- ii) Visitor In/Out Workflow (VIO) and
- iii) Material In/Out Workflow.

- **Methods and technologies:** STLC, Java, Eclipse, Manual Testing, Regression Testing, Functional Testing, UI Testing, Mobile App Testing, Appium, Compatibility Testing, Bug Tracking.
- **Role:** Software Test Engineer (Senior member handling team of twomembers)
- **Responsibilities:**
 1. Liaising with client for requirement gathering.
 2. Analysis of functional designs, requirements for development of test plans.
 3. Carrying out manual testing and automation testing for various modules of the product as per test plan.
 4. Involved in integration testing.
 5. Undertaking different review processes as per the quality goals of project and organization.
 6. Collaborating with the Front office and client for clarifications.
 7. Coordination of induction and knowledge transfer for new team members.
 8. Providing timely data to mangers for maintaining all project related matrices and providing data for project management activities.

3. Project: BMW One App – AU Market and IN Market

- **Period:** Aug 2019 – April 2020.
- **Company:** BMW India Pvt. Ltd.
- **Task Area:** Requirement Analysis, Testing Mobile App (Android & iOS) Testing, Appium, API Testing, Xray, JIRA, Test plan, Battery Historian, Fiddler.
- **Description:** The BMW One app was aimed to have all the services and features combined in a single app. It was rolled out for AU Market and IN Market after successful completion of UAT.

➤ **Methods and technologies:** STLC, Java, Eclipse, Manual Testing, Regression Testing, Functional Testing, UI Testing, Mobile App Testing, Appium, Compatibility Testing, Bug Tracking, Battery Historian, Fiddler, API Testing, Postman.

➤ **Role:** Lead QA (Lead member handling team of three members)

➤ **Responsibilities:**

1. Liaising with client for requirement gathering.
2. Analysis of functional designs, requirements for development of test plans.
3. Carrying out manual testing for various modules of the product as per test plan.
4. Involved in integration testing.
5. Undertaking different review processes as per the quality goals of project and organization.
6. Collaborating with the Front office and client for clarifications.
7. Coordination of induction and knowledge transfer for new team members.
8. Providing timely data to managers for maintaining all project related matrices and providing data for project management activities.

CAREER OBJECTIVE

Use my knowledge and experience for delivering on all commitments to client. Grow professionally and personally as I continue to learn different values at workplace to achieve all highest goals set within organization.
