PROJECT

Quad-copter

Tool: Arduino Uno

A quadcopter, also known as UAV (Unmanned Aerial Vehicle) uses four propellers for lift and stabilization. The rotors are directed upwards and they are placed in a square formation with equal distance from the center of mass of the quadcopter. Now a-days, quadcopters have received considerable attention from researchers as the complex phenomena of the quadcopter has generated several areas of interest.

Team size: 2.

Role: Developer.

YourDriver.com
