## PROJECTS

- **Project 1:** Worked on **City App**, city app is a one destination for a city, where a business/shop owner can register their shop, advertise their products using WhatsApp advertising. Shop/business owners can display their product range with all description and details, users can filter the shops as per the category, can browse individual shop products, add items to cart and proceed checkout. There is an option for multiple payment options, delivery slots and users can also schedule the delivery. Users can also book services like pest control, plumber etc. It's a complete application with all services from grocery store to household services, from advertising to purchasing.  
**Tech Stack:** React Js, HTML5, CSS3, TypeScript, Redux Toolkit, Material UI.
- **Project 2:** E-commerce website for **Armada Group** based in Kuwait. Developed their e-commerce website **RIVA**, comprising all new features. Developed the complete cycle from product listing, cart process, coupons, address and several payment methods including Google Pay, Apple Pay. Integrated SEO tools including Google Analytics, Google Tag Manager, Facebook Pixels, Google Merchandising and Insider.

**Tech Stack:** React Js, HTML5, SCSS, JavaScript, Redux, Material UI.

- **Project 3: View Sense Portal**, an automated software used to detect the values of smart windows. It's a portal used to detect the temperature, humidity, light intensity, lux in very large companies buildings, which is covered with smart glasses. Smart glasses are connected with IOT devices, which constantly record the various parameters inside the building.

Portal is constantly showing the active device reading, including features of enabling and disabling devices, scheduling a device, inspectors and senses.

Admin portal is used to maintain users including admin, building manager and IOT technicians, and also keeps records of buildings data.

**Tech Stack:** React Js, Next Js, JavaScript, HTML5, SCSS, Redux.

- **Project 4: My Joining portal for Namdhari Group of Companies**, an entire joining automation system. Which automates the Pre-onboarding, On-boarding and post-onboarding process for new joining candidates. Including a fully automated system for HR to ease hiring and an admin panel to maintain HR rules, company vision, values and details. Candidates can fill various stages details including personal details, Education details and Experience details.

HR can send reminder mails, Joining information to candidates through user friendly dashboard.

- **Project 5:** Supervising and developing an e-commerce website with React Js for frontend and Node Js for backend. Created an entire API series for it using express JSON web tokens, created an Admin panel to maintain and manage orders, Users, checkout process and payments and to maintain the entire UI of the website.

**Tech Stack:** React Js, Redux, HTML5, CSS3, Redux, Node Js, Express Js, MongoDB.

- **Project 6:** Developed and maintained a fashion website in React Js with full functionality and design and also created the backend to dynamically manage complete layout of the website.

**Tech Stack:** React Js, HTML5, CSS3, JavaScript.
