J.V.T COLLEGE,TEMBHURNI PUNE 2013

EMPLOYMENT HISTORY

Apptware Solution LLP.
(January 2019 - August 2021)

Project Name : BAJAJ (FINTECH-FINDER)

Tech Stack : Nodejs, aws.

Roles & Responsibilities :

Creating rest apis using express and mongodb.
And deploy on AWS server

Project Name : BAJAJ (FINTECH-FINDER)

Tech Stack : Nodejs, aws.

Roles & Responsibilities :

Creating rest apis using express and mongodb.
And deploy on AWS server

EMPLOYMENT HISTORY

Exaltare Technologies PVT.LTD
(Dec. 2023 - Present)

Project Name : Western Climate Initiative(WCI)

Tech Stack: Nodejs, Reactjs, Serverless, AWS, Postgress

Description : WCI, Inc. provides cost-effective technical and administrative solutions for supporting the coordinated development and implementation of our Participating Jurisdictions' greenhouse gas emissions trading programs. Since our creation in 2011, we've grown our range of services and have adapted our capabilities and systems to enhance service delivery. Through major technology investments, we've enabled the Participating Jurisdictions to build and maintain secure, reliable, and robust IT systems critical in our shared work.

Roles and Responsibilities :

Gathering requirement. Make rest api related to requirement and testing that rest api and integrate with UI. Implementing aws services. like SQS,CloudWatch events etc.

Software Development Engineer-1

Eikyoo Private Limited (Oct. 2022 - Dec-2023)

Project Name : Fooder

Tech Stack: Angular, Nodejs(typeorm), MongoDB, Postgres

Description : Fooder is (a WhatsApp based online food ordering and management platform).

Roles and Responsibilities :

1. gathering requirement.
2. creating UI component.
3. Creating rest apis
4. API integration
5. Payment integration

Project Name : Avacado

Technology: React, Nodejs, PLSQL

Description : Avacado (npm plugin) helps you engage with customers on their most preferred channel WhatsApp. We offer other added customer support handling features to enhance the customer experience.

Roles and Responsibilities :

- gathering requirement.
- creating react web component.
- Creating rest apis
- API integration
- Payment integration

Exaltare Technologies PVT.LTD **(Aug. 2021 - Sept 2022)**

Project Name : Sketchnote

Tech Stack: Nodejs

Description : Sketchnoting is a form of note-taking, hence the “noting” part of it, but as you might guess it involves bringing more visuals into the process compared to typical note-taking, hence the “sketch” part. The whole idea behind adding sketches to your notes is that it taps into parts of your brain that would lie dormant if you only use words to explore ideas. It’s the combination of the two that’s most powerful – using both words and visuals while taking notes.

Roles and Responsibilities :

Gathering requirement. Make rest api related to requirement and testing that rest api .Implementing aws services. like S3, CloudWatch events etc.

Technology: React, Node (serverless),

MongoDB

Single-handedly developed the APIs to bind the React js frontend architectures with the backend of the new test management system.

Ex- Funding

Technology: Angular, Nodejs, MongoDB

Worked on the API development and bindings of the solution where the demand for the technology was very complex

Project Name : ESports

Technology: AWS serverless, React, MongoDB,

Description :The esports platform enables tournament hosting for mobile and desktop games.

Roles and Responsibilities :

I have worked as a backend developer for an eSports project where I have developed multiple APIs for a different set of features in the web application which also supported the mobile technology.

iAQUA IoT Backend:

Technology: Node JS, AWS serverless, AWS SES, SNS

Roles & Responsibilities :

Developed backend to collect the data and store in the DB from Electric water scooter.

Written APIs to provide the data to mobile app and Admin panel

-This project enables iAQUA to have IoT capabilities to their water scooter.
