EXPERIENCE

High-Peak Software - 2year 10months

Vaeso (Factory Management Tool) - Lead Front End Developer - Present

There are three Web Applications under Vaeso which are QCG(Quality Control Guardian), SFLC (Supply Floor Live Control) and DFLC (Delivery Floor Live Control) handled by Factory users.

Manage a team of 4 by assigning the task. Optimize application for maximum speed and scalability Route-level code splitting. Handling the live data and showing to the factory users.

Developed the UI/UX screens to flexible code with reusable components using ReactJS, HTML5, SCSS, JavaScript, Redux, Redux-Saga and React-Router.

Contract Wrangler - Full stack Developer

Machine Learning Platform to manage all kinds of contracts. Clients can upload any contracts to the application and the application will read the contracts using Optical Character Recognition(OCR). After reading the contracts application will extract values of contract and shows in the application.

Discussing with the US team and collecting the requirements and giving suggestions to improve the product. Implemented the Backend and Frontend both for the application as Full stack developer.

Technologies used: ReactJS, Redux, Saga, HTML5, CSS3, NodeJS and MySQL.

SUMMARY

Results-oriented Full stack Developer dedicated to creating and optimizing interactive Web Application. I have 4 years of experience in development. Hands-on and highly familiar with a JavaScript framework, Self-starter with capabilities to start in an ambiguous environment.

SKILLS

AngularJS
Basics of Angular2

Project Management

Almanac Jira

EDUCATION

Computer Science

Government Engineering College

2012-2016 Chamarajanagar, Karnataka

VisionAi - Front End Developer

Vision AI is an automated AI defect identification system. It is an intelligent platform that leverages machine-learning models and computer vision for anomaly detection from surface images. The application records and identifies unmarked surface-level defects in real-time for products, such as auto body parts, healthcare equipment, apparel, footwear, etc.

Developed UI/UX screens into functional code and designed the whole front end application with Authentication and Authorization. Discussed and developed the flow of the application.

Technologies used: ReactJS, Redux, Saga, HTML5, CSS3, .

Big Brain - Front End Developer

Razorthink AI Studio lets you visually build data transformation recipes, DL/ML/Hybrid models and end-to-end pipelines that ingest data from your enterprise environment and create intelligence feeding your business systems.

Understanding the design mockup and converting them into the functional web pages using ReactJS, Redux and Saga.

And worked on multiple websites and helped the marketing team in SEO. Trained the multiple candidates in Front End.

Technologies used: ReactJS, Redux, Saga, HTML5, CSS3, Firebase.

Arwizon Digital- 1year 2months

Restaurantware - Front End Developer

Converted the whole site from one framework to another (Blueprint to Stencil) in Bigcommerce. And made the whole website responsive, SEO standard's and included some Google analytics code to help digital marketing. Developed a new feature that includes many numbers of products into cart to achieve Quick Order (Bulk Order).

Technologies used: HTML5, CSS3, HandlebarsJS, JQuery, Javascript, SCSS.

Amin Reality - Front End Developer

Amin Reality is the real estate business platform. Users can sell/rent their properties via Amin Reality. Built the application using AngularJS from the scratch.

Technologies used: HTML5, CSS3, AngularJS, JQuery, Javascript, SCSS, Bootstrap.

Tankless Parts, Bliss World, HVAC, Create Your CupCake (CYC) and Naturally Curly - Front End Developer

The above all clients are small scale industry sellers. Tankless parts sell the parts of the water heaters. Bliss sells face screens and beauty ingredients. HVAC also sells the parts of a water heater. Create Your CupCake sells the cakes. Naturally curly hair sells the hair improving ingredients. I developed and improved their websites by adding functionalities and SEO.

Technologies used: HTML5, CSS3, HandlebarsJS, JQuery, Javascript, SCSS.

Place: Bangalore (Currently working from home)
