CAREER OBJECTIVE

To join an organization that provides me an opportunity to utilize my skills, gives me an environment to innovate and enhance my technical expertise and provides me a launch pad to embark upon a global career.

PROFESSIONAL SUMMARY

- Total IT experience 6 +years.
- Currently Working with NICE-InContact, Pune from May 2019
- Previously worked with Wipro and DELL EMC.

PROJECT PROFILE

Company : NICE-InContact

Project : Product Catalog and Tenant Management

Skills : Spring Boot, Java 8, REST API, Microservices, AWS, Angular

Description : TM is responsible for any new customer and its users onboarding into Nice-Incontact. TM handles all Tenant related functionalities like creating new Tenant ,providing application for that tenant, branding profile for any partner ,maintain licenses for that applications to those tenants etc. TM is part of cx-one suite it as multiple application which are used by the customers or partners based on their requirement at time of onboarding. Later also if they need any other application, they can do so by requesting license for that application. PC is one which maintains all the details related to the applications and its feature which are available at the time of Tenant creation in TM.

Roles and Responsibilities

- Worked on PC-UI.
- Developing a REST API.
- Fixing issues/bugs on TM and PC.
- Writing AWS DDB alarms and creating dashboard for these alarms using AWS CloudFormation Template

Company : DELL EMC

Project : ViewTrust

Skills : Spring Boot, Java 8, REST API, Spring Data JPA

Description : ViewTrust is a risk and compliance monitoring tool which support various industries certificates like PCI, HIPAA etc. There are two types of users – CSP and Tenant. It scans assets details from multiple scanners like vcenter, qualys, saltstack etc. Once the asset details are available then security and software jobs executed for those assets which gets software and compliance details. It also has the facility to upload the asset details via file upload which available is from some other sources like Rapid7, Nessus etc. These files have all the details along with asset details like software and vulnerabilities details for that asset. Based on vulnerabilities It also shows risk and compliance report for those assets. So that the user can take the required action to resolve those risk and vulnerabilities.

Roles and Responsibilities

- Worked on Asset Management module.
- Developing a REST API.
- Fixing bugs on other modules as well.

Company : WIPRO

Project : ICV

Skills : Spring Boot, Java 8, REST API, Micro Services, Pivotal Cloud Foundry

Description : In this project , We are making two applications data in sync. When there is any change in one application data like any update or any delete or any new entry , then an event will be published and another application will be notified. Another application will read those event and event will have the details of what fields has been changed. On the basis of changes fields , this application will retrieve the values of the changes fields .With these values a new JSON request will be created to call the Stored Procedures to update the another system database with the latest changes in the first system.

Company : WIPRO

Project : D2C

Skills : Core Java, REST API, Fuse, Camel, Hibernate, Dozer Mapping

Description : This project provide facilities to user to register and login on customer portal and buy product online .User can see the available product like pensions, bond etc once he/she logged in. He can also generate illustration/Quote and see which product is suits as per requirement and then he/she can apply for application to buy the product online. This application is divided in three major layers- Integration layer, Enterprise layer and 3rd Party application .I have worked on integration layer form end to end which again divided into three layers – proxy, service and connector.
