---

## Professional Summary

Salesforce/Vlocity developer with 3.5 years of experience in designing and developing salesforce solutions using Vlocity components, LWC and Apex. Have worked on 3+ salesforce projects and experienced in seamlessly integrating Vlocity and salesforce applications with existing systems and third-party services, ensuring a cohesive and efficient workflow. With a strong knowledge of developing salesforce applications, automations and tools, I am looking forward to a senior role to show my expertise.

## Work Experience

### Development Support Engineer (November 2022 - Current)

#### *Salesforce India Pvt Ltd.*

- Job role includes working with Salesforce professional services (Order Management) in design and implementation of salesforce & Omnistudio products in customer's environment.
- Troubleshooting and debugging of issues in salesforce core product and flows along-with identification and resolution of issue with governor limits.
- Worked on code optimization of salesforce and Vlocity components and have reduced page load time upto 50% for experience sites.
- Have worked with half a dozen customers on their start to end development and deployment of salesforce solutions.
- Have worked with Flows, Omniscripts, IP, Dataraptors, Flex Cards, Apex Classes and Triggers.

### Salesforce Omnistudio Developer (February 2021 - November 2022)

#### *IBM India Pvt Ltd.*

- Developed and deployed guided experience for order submission in Bulk using Vlocity (Omniscript) and LWC components.
- Worked on customisation of LWC to work along with the Vlocity components to override the limitations of Vlocity components.
- API Integration using Integration Procedure for Contact and Phone validation of customers from 3rd party DB of the customer.
- Assisted in weekend deployments of Salesforce and Vlocity components through CI/CD pipelines and Vlocity Build Tool.

### Software Development Intern (June 2020 - January 2021)

#### *Codebucket Solutions*

- Worked as Java Developer Intern on Android Projects.
- Main responsibility was to create Data Models for data coming from API and get it parsed in the Android App using Java and OOP concepts.
- Worked on Integration of google API for location in Android app and other standalone functional components.
