PERSONAL PROJECTS

Post Graduation Diploma in Data Science - IIIT-Bangalore
(12/2019 - 01/2021)

IMDB DATA ANALYSIS

- Identified the key aspects of movie's success rate and developed an executive summary to help the new production companies expand their business in the international movie market. Performed various python operations for handling the data and to get insights about the existing IMDB data.

LEAD SCORING DATA ANALYSIS

- Developed a Logistic Regression model using Jupyter notebook which predicts the probability of a person to convert as a lead to an online education company depending upon various factors of their interaction.
- This analysis helps the company reduce their investment in time, money, and effort to the organization by narrowing the focus area to a limited number of people who are more likely to be converted as leads.

IPL DATA ANALYSIS

- Developed a tableau worksheet using IPL'S previous years data through excel.
- This helped in analyzing the performance of different players and teams in past years to predict their performance in coming tournament.

CAPESTONE PROJECT – FINANCE AND RISK ANALYSIS

- Analyzed the stock market trends on the provided data and developed portfolios for clients based on their investment strategy. Prepared jupyter notebook for suggesting suitable stocks to clients based on various visualizations and matrices.
- Developed a tableau dashboard representing reaction of different company's stock. This project helped in getting through the trends of various stocks and helped in taking better investment decisions.
