## **PROJECT WORK**

### ➤ **Onwardpath Technology Solutions, Chennai**

#### 1. Lightning Community: Scholarship Portal for Institutes

- Multiple Institutes can register for the community and apply for the different Scholarship programs.
- Various forms like Application form, Grant application form, Scholarship form, Annual Report Program Information Form etc were present in the community.
- Internal authorized people can review the application or approve it or send it back for modification.
- Scholarship provider agency was granting amounts to institutes and then after institutes can grant the amounts to its students.

#### 2. Host Bridge Integration LWC

- Client wanted to pull data from Hostbridge with Insert/Update decision to be made from LWC screen.
- The data from API will be shown on screen with the help of multiple callouts and will be selected by user and after that it will be updated/created in the salesforce.
- Client also had Batch job which runs nightly to get this data into salesforce. But the purpose of LWC to create it immediately.

#### 3. Tuition and Reimbursement Lightning community

- This was an enhancement and development project to support the ongoing modifications to existing community.

### ➤ **Persistent LTD, Pune**

#### 1. Upgrade UI 2.0 (LWC)

- We are implementing new UI for product upgrade flow where user will see all installed products at one screen and he can choose the products to be upgraded or downgraded.
- Main motive behind this is to save time for Upgrade order. Current APTTUS UI is very slow.

#### 2. GTV Migration

- Client decided move all customers to the billing platform GoTransverse (New feature rich billing platform). Currently they are using legacy billing manager system.
- The challenge here is that two of the system had different structure of maintaining and processing of the data So, To fill this gap between the data We have

implemented batch jobs to handle all the data and make it ready for GTV system, After this Boomi Integration will take care of the pushing data to GTV.

### 3. Cost Center 2.0 (LWC)

- There was a requirement of importing and exporting over 80k records through the LWC. Customer can download/upload the file through the partner community and can do updates to data by uploading it again.
- We are using Synchronous and Asynchronous process to handle this as large amount of data cannot be handled in one apex transaction in Salesforce.

### ➤ **Dreamwares IT Solutions, Nashik**

#### 1. API Integration for Warehouse activities:

- Application manages the Operation of warehousing and storage facilities for land transport activities.
- Application stores the Order, Customer, Invoice and Payment Information in the salesforce. It also has ability to send invoice every month to customer according to their order.

#### 2. Migration from Salesforce Classic to Lightning:

- Analyzing the existing processes of the org and Migrating the multiple Visualforce pages and Javascript buttons to be compatible with lightning without affecting the process.

#### 3. Lightning Component for News updates with integration to WebHose API

- User can see the latest news articles and read it. Also configure the preferences/criteria to get related content.
- WebHose integration will request and insert new news records in the Salesforce periodically.

#### 4. Form Assembly Configurations and syncing:

- Form Assembly is platform where multiple forms can be created by point and click features.
- We needed to create and update this forms and map this data (back and forth) to Salesforce.

#### 5. Lightning Component : Quote Calculation component

- Component is capable of select product and related multiple configuration attribute (These were the SF record with specified from factor value).
- User can add as much configurations in the table and later on can edit the configuration from table itself.
- Based on the configuration selected the QuoteLineItems price was calculated and quote was created.

#### 6. Lightning Community: Suppliers and buyers

- Internal users have authority to approve/reject the suppliers and buyers applications.

- Buyers can post a RFP, required documentation and can also add amendments to it. Later on they can select the supplier from available proposals/tenders.
- Suppliers can review and submit proposal/tender for specific RFP. Suppliers can also edit the proposal/tender until the close date is passed.
- All process contains Email notifications, Documents versioning.

#### 7. Integration: Aptify API and Salesforce

- System needs to maintain Member and their membership details with two way sync. Multiple record were created and updated frequently in both systems.

#### 8. Other Tasks

- Triggers, Batch classes, Integrations, VisualForce Page, Email sending functionalities, Deployment, Workflow creation, Process builder, Flow.

### **PERSONEL PROFILE**

- Date of Birth : 19/08/1995
