EXPERIENCE

Cognizant Technology Solutions — Software Developer Intern

11th Jan 2020 - Present

Project Name : Home Remedies

Description : This portal helps the user to enter the disease name and suggest home remedies that can be done to recover from the disease and also if the user enters fruit names or any herb names it will provide the details where it will be helpful to cure a disease. Only registered users can enter into the portal, and we will have two different users who are members and admin. Admin also provide functionality to shop the fruits/herbs online, where the selected items need to be added to cart and payment calculations need to be done.

Project Name : Chubb-WCS-Astrus D-Migration

Description : My part of the project was to create a new website 'DataFix UI' which will be used for correcting data and re-submitting migration request for policies . As explained in above steps, once staging table population is completed by Data Lake batch, the FE Data Load batch will start processing these policies. During this processing, if a policy fails (may be due to

validation error or environmental error etc.) then it will be considered as an erroneous policy and its status will be updated as 'WCS-Error' in the Request table. Such erroneous policies will be available in the Data Fix UI for data correction, after which users can submit it for re-processing for FE data load batch. Such erroneous policies will be available in the Data Fix UI for data correction, after which users can submit it for re-processing for FE data load batch. The DataFix UI will be a standalone website which can be used by only authorized users. The list of active authorized users will be maintained in a sql table. When a user will open this website his/her login ID will be fetched from network automatically and will be validated against the user table.

Tata Technologies - Web Developer Intern

15th June 2019 - 15th July 2019

Project Name : Asset Management System

Description : It is a web based application, which is controlled by the admin in maintaining the details of his users, assets and various components.

→ **Connect 3 :** It's an Android game of strategy where users can play among themselves . They need to connect 3 items in a single line horizontally, vertically and diagonally. The match continues until a person wins that round . After a play wins a round , the result is displayed on the top of the page and a 'Play Again' button is displayed .The players can play again after the result of the game has been known if they want .
