PROJECT UNDERTAKEN

➤ **REAL TIME MOTION DETECTION IN SURVEILLANCE CAMERA**

Surveillance cameras are used for the purpose of observing an area. They are often connected to a recording device or IP network, and may be watched by a security guard or law enforcement officer. Recorded data required huge storage capacity and analyzing this data is time consuming process if done manually. To resolve this issue we proposed a method based on absolute sum of difference (SAD) technique to detect key frames and generate smaller size video by combining these key frames(using python).

➤ **DESIGNING AND STUDY OF FLARE ANGLES OF HORN ANTENNA**

In our project main focus is on how to increase gain , directivity and radiation of horn antenna.To achieve this goal we are using tapering angle property of horn antenna , variation in tapering angle result into variation in gain , directivity , and efficiency of antenna(using CST Tool) .
