- Core java
- OOPs
- Collection
- Multithreading
- Microservices
- Spring, Springboot
- Jpa, Hibernate
- Postgres, SQL
- Angular Js, Angular 8
- Type script , JS
- HTML, CSS ,Jquery, Bootstrap

- Jasper, iText
- Junit
- Windows and Debian OS

Personal Skills

- Singing.

Projects Details

Incident Management System: Feb-2017 to Sep-2017

Role: Developer
Technologies: Core Java, Spring, Hibernate, PostgreSQL, Angular Js Junit.

Project Description:
AMTS, Ahmadabad govt. Live Project for managing the incident related work for various transports and buses.
The main motto of this application is to create new incidents for buses, to record the same, to fetch and manipulate master data, to track incidents, to check task history and many more.

Responsibilities:
• Rest API coding.
• Creation and manipulation of master data in both server and view.
• Creating some workflows for incidents from server using java and hibernate.
• Creation of record and track for each incidents with export facilities.

Dynamic Reporting :   June-2017 to Nov-2017

Role: Developer
Technologies: Core Java, Spring, Angular Js, D3 Js, Node

Project Description:
Fully analytical project. Complete package of D3js charts.
Here any one can fetch master data, filter it and create various understandable charts and record with export and import features.
Heat Map, Pie, Donought, Bar ,Map, Grid and various types of chart can be created

Responsibilities:
• Creating the view and master data.
• Coding for charts.

Study Manager: Nov-2017 to Jan-2019

Organization: Coleman.
Client: Coleman
Role: Developer
Technologies: Angular 8,Type Script, Spring, Java, Hibernate, Sql, JQuery., Junit.

Project Description:

It's a USA client's project based on radio stations and its functions.

Application caries a hard master data with 7 to 8 layer of data dependencies , and it's a single page application with routing in same page separated by sliders.

Its work on studies of data and creating questionnaire and answer set , record track , record lock ,breakdowns , record exports and etc.

Hence its developed on angular and type script , most of the functionalities are done in type script(client side) rather than server side.

Responsibilities:

• Total view of application ,routing of modules.
• With help of spring boot master data manipulation and lock unlock of studies data .
• Rest API coding.
• Writing test cases using Junit and Jasmine.
• Managing the project

Doordrishti IOCL: Jan-2019 to Jan -2020

Organization: IOCL.
Client: IOCL
Role: Developer
Technologies: Java8, Multithread, Collection, Spring boot, hibernate, thyme leaf, jQuery ,Ajax , Junit, Angular 8.

Project Description:

Doordrishti application produces data records of cylinder bottling by IOCL and push the records to head quarter in a interval of 1hr. Data are fetched from different devices during bottling and get calculated final needs by the application and pushed to head quarter.

Application is built in focus of master and slave configuration. So why we will be less worried about any failure system and data pushing failure.

Responsibilities:

• All views/pages in application, routing, system setup, data pushing.
• Rest API development and page designing using thyme leaf.
• Writing test cases using Junit.
• UAT issue handling.

CIB & IPSH: Mar-2020 (Continuing)

Organization: Alfaris.
Role: Developer
Technologies: Java8, Micro service, Collection, Spring boot, hibernate, jQuery ,Ajax , Junit,
Angular 8.

Project Description:
CIB is a B2B application as a product of Alfaris. It works for corporate banking like payroll
processing, vendor payment, etc.

Responsibilities:
• To design and develop customer portal using micro service.
Manage customer account and payment.
