PROJECT DETAILS

Project : Undisclosed

Role : Sr. Tech Lead

Description:

The client being in the wellbeing industry wanted to have channels to engage their customers, corporate clients and practitioners. We are helping them to build various functionalities to be used in their communities.

Responsibilities:

- Gather and analyze business requirements and critical data elements across functional areas.
- Involved in complete technical design sessions and architecting/documenting technical solutions that are aligned with the client's business objectives
- Develop custom solutions and interfaces completely from scratch till solution delivery
- Serve as an expert in Salesforce.com configuration and guide team members in configuration decisions.
- Designed dynamic lightning components which can be used on lightning page layouts.
- Performing Code review, suggested the best practices. Handled deployment requests to production. Executed demos to client on modules and trained end users on the same

Project : Undisclosed

Role : Technical Lead Consultant

Description:

Client is a leading independent retailer of gold and silver products, including bars, rounds, and coins. As a leading precious metals company since 2008 and wanted to implement CRM to manage their business.

Responsibilities:

- Gather and analyze business requirements and critical data elements across functional areas.
- Involved in complete technical design sessions and architecting/documenting technical solutions that are aligned with the client's business objectives
- Develop custom solution and interfaces completely from scratch till solution delivery
- Designing the dynamic field mapping solutions for data imports from various third-party systems
- Serve as an expert in Salesforce.com configuration and guide team members in configuration decisions
- Drive or participate in internal initiatives to improve the client and Business Applications tools, processes, quality and results
- Designed dynamic lightning components which can be used on lightning page layouts
- Performing Code review, suggested the best practices. Handled deployment requests to production. Executed demos to client on modules and trained end users on the same

Project : Undisclosed

Role : Technical Lead Consultant

Description:

This project involved integrations with various systems and creation of lightning components to pull data from these external systems and show in salesforce.

Responsibilities:

- Analysis of business requirements and translated to functional and technical requirements.
- Develop custom solutions and interfaces completely from scratch to end.
- Worked on dynamic lightning components which can be used on lightning page layouts.
- Break down the requirements into smaller tasks and assign them to team
- Code review and deployment to production and giving demos to clients on completed work.

- Designing framework for dynamic integration with various systems.

Project : **Undisclosed**
Role : **Technical Lead Consultant**
Description:

This project is about Implementation of a comprehensive site app on contact-user model to allow parents to enroll students for various courses to accommodate their brighter learning.

Responsibilities:

- Worked on technical solution and design to achieve the business process implemented.
- Responsible for modularizing the tasks and assigning it to team members.
- Monitored implementation with progress status.
- Resolved technical issues and supported team as required to get those issues fixed and reviewed them.
- Implemented Sharing settings for site users
- Involved in code review, functionality and optimized code to adhere to best practices.

Project : **Undisclosed**
Role : **Technical Consultant**
Description:

The project involves the implementation of Service Cloud having a custom service portal for employees. It also had some lightning components implementations for internal users.

Responsibilities:

- Development of client requirements as per development plan.
- Worked on configurations for the implemented service portal to meet the business needs of the customer.
- Developing lightning components.
- Implemented service classes in Apex to accomplish business rules.

Project : **Undisclosed**
Role : **Sr. System Executive**
Description:

There were multiple client requirements on different projects as we were working for a system integrator. Spanning from community implementations for non-profit organizations to creating lightning components.

Responsibilities:

- Developed Lightning Components and Lightning Apps
- Integrated Lightning components in Visualforce pages.
- Developed Visualforce pages and Lightning components using Salesforce Lightning Design System styling.
- Developed various visual force pages, triggers based on various client requirements.
- Worked on XML parsing, to parse XML response getting from Web-Service callouts and created CSV file and attached it to custom object.
- Designed Unit Test cases and implemented test classes to execute the designed test cases and achieve the required code coverage for production deployment.
- Developed JavaScript code for changing components containing iFrame height based on the content size of the component.
- Provided support for various configuration issues on the projects.
- Worked on various Salesforce to Salesforce integration projects using Informatica Cloud.

Project : **Undisclosed**

Role : Sr. System Executive

Description:

The project involves the creation of mobile responsive pages using SLDS to view Product and Price book details in Salesforce1 mobile.

Responsibilities:

- Prepared time estimation.
- Developed various Visualforce pages to display Product and Price book pages on Salesforce1.
- Overridden standard account page with custom developed page with required SLDS, CSS and jQuery to match standard look and feel.
- Designed Unit Test cases and implemented test classes
- Performed deployment of the developed components

Project : Undisclosed

Role : Salesforce Solution Specialist

Description:
