Title of Project	SyntBots Process Recorder
Role	Dot Net Developer
Platform	Microsoft.Net
Technologies Used	C#.Net, MVC, SQL Server, jQuery, HTML, CSS
Description	<p>It is an application developed for business process where user create Action and Store as image and videos for the process, sub process, scenario level, also user share Action recorded with other users' details.</p> <p>SyntBots Process Recorder is process discovery tool developed by Atos Syntel. This tool helps to capture user actions on the computer or laptop for a given process. Multiple important attributes for the process are captured automatically which helps to identify the process sequence flow, applications used, average handling time, underlying controls like textbox, dropdown etc. The tool intelligently analyses these attributes and creates outputs that help in automatic-process documentation. The technical footprint of the flow helps to identify the automation feasibility for that process.</p> <p>It consists of two versions – Enterprise and Standard.</p> <ul style="list-style-type: none"> • Standard version is desktop based where all the activities viz. data definition (process / subprocess / scenario) recording, output generation is done at the desktop level. • Enterprise version contains the portal where the data (process / sub-process / scenario) is defined and then recording is done at the desktop level and the generated output/data is sent back to the web portal for various dashboards. • The output generated BPMN, Visio etc., is used to utilize to understand process / automation etc. • Analyzing the process with the workflows to understand bottlenecks if any. • Performance tuning based on comparison between scenarios • The artifact documents such as SOP / BRD / BPMN for Knowledge repository.

Title of Project	B2C
Role	Dot Net Developer
Platform	Microsoft.Net
Technologies Used	C#.Net, MVC, SQL Server, JavaScript, HTML, CSS
