

Mamali Monalisa Mohanty

Mobil Number – 8805237133

Email ID – mamalimonalisa.mohanty@gmail.com

PROFESSIONAL SYNOPSIS

- 4.8 + years of experience in ETL Testing, Manual /API Testing (SOAP UI) in Banking and Finance domain.
- Proficient in creating and executing test cases on required requirement / User Story execution.
- Proficient in software testing under (SDLC /STLC) life cycle, Agile Methodology and QA processes (End to End Flow).
- Experience with various testing like ETL, Black Box, Functional, integration, System, User Acceptance (UAT), Performance, and Regression Testing.
- Bug reporting and tracking up to till closure.
- Experience of leading team handling and working to serve best delivery.
- Very good client handling capability and ability to perform under tight schedules.
- Hands-on experience in Test Management Tool to track Testing and Defect Management Process like (ALM, JIRA, TFS & VSTS).
- Experienced in Banking and Finance, Financial Supply Chain, Retail and Financial Crime (AML Compliance) domain.
- Preparing the Demo documents and Demo session specific to whole application and Individual User Stories which we are validating.
- Have worked for Infosys for respective client / project i.e. Bank of America (Project - Availability Dash Board), Microsoft (Publices).

EDUCATIONAL CREDENTIALS

- ✓ BE (CSE) from Biju Patnaik University Technology (BPUT), Odisha in 2010.

COMPETENCIES

ETL Tool / Database / BDP	Informatica Power Center SQL Server, ORACLE SOAP and REST Client (API Tool) ETL Data Aspect – Structured and Unstructured
Domains	Banking & Finance, Portfolio Management & Web Tech.
Testing Process Tool	ALM, JIRA, SOAP and REST Client API

WORK EXPERIENCE

Organization - Infosys BPM. LTD

Duration - Aug 2018- Till Date.

PROJECT PROFILE:

Project name	Available Dash Board (Data Migration – Informatica)
Client	Bank of America (BOA)
Role	Technology Support Analysts
Duration	March 5 2019 – Till Date

Project Description:

Availability Dashboard is the dashboard where data migrates into this single dashboard using Informatica Power center. Source System data are related to Customer, Product (CASA – LOAN – Term Deposit), Portfolio and Risk Management in Structured - Un structured Data Form. Data transformation on Structured (Relational Data) - Un structured (Physical Attachment) Data from Source (SQL Server and Oracle) to final Target system for inbound and outbound system.

Contribution and Responsibilities:

- Preparing the test scenarios and test case on the basis of Base Product level and User Stories related.
- Involving in the Test Execution related to Data Migration from Source – Target system.
- Maintaining all base Requirements and related User Stories in TFS.
- Preparing the Test Case writing and Maintaining Test Execution in ALM.
- Raising the valid defects on the basis of functional, UI (User Interface), Backend Database and batch related in ALM.
- Preparing the Traceability Matrices on the basis of User Stories, Test cases and Defect coverage.
- From the Prospective of Agile, Handling the team externally and internally act as an individual contributor.
- Interacting with the Product Owner, Development and Database Team on the basis of functional and Technical Defect related queries.
- Coordinated with the automation team to provide the existing and regression phase of scenarios and also provided them the existing test cases for their automation scripts.
- Have gone through the Daily Scrum Meets, Sprint Planning, and Demo Sessions among Development, Testing and Product Owner (BA) Team.
- Interacting with the BA (Business Analysts and Development team on the behalf of the Requirement Spec and end to end flow aspect.
- Initiating the Data Migration process from respective Source System to Specific Target System in the form of Tableau reporting, SFDC, NETSUIT and ECM through Informatica Power center.

Project name	FAS (Fiduciary Advisory Services)
Client	Merrill Lynch (Bank of America (BOA))
Role	Technology Support Analysts
Duration	Jan 3 2020 – Jan 20 2021

Project Description:

Merrill Lynch is the investment and wealth management division of Bank of America. As part of the quality assurance team in the Retirement Wealth division of Merrill Lynch, I played a key role in the delivery of Fiduciary Advisory Services portal (FAS). FAS was primarily used by Merrill’s financial advisors to enroll and manage retirement plans for institutional investors. 401K Plan is the tax- Qualified-defined contribution retirement AC-count in the USA, Regulated by the IRS. Merrill Lynch & BOA works on 401K. Merrill Lynch sends Bank of America inbound files which contains participant indicative data (Name, address, SSN) and payroll data (ex: Compensation, contribution amount) bank of America will send election data (ex: Saving rate, loan data) back to the client on outbound files. Banking System customize 401k Plan under IRS Guide lines.

Contribution and Responsibilities:

- Preparing the test scenarios and test case on the basis of Base Product level and User Stories related.
- Involving in the Test Execution related to Data Migration from Source – Target system.
- Maintaining all base Requirements and related User Stories in TFS.
- Preparing the Test Case writing and Maintaining Test Execution in ALM.
- Raising the valid defects on the basis of functional, UI (User Interface), Backend Database and batch related in ALM.
- Preparing the Traceability Matrices on the basis of User Stories, Test cases and Defect coverage.
- From the Prospective of Agile, Handling the team externally and internally act as an individual contributor.
- Interacting with the Product Owner, Development and Database Team on the basis of functional and Technical Defect related queries.
- Coordinated with the automation team to provide the existing and regression phase of scenarios and also provided them the existing test cases for their automation scripts.
- Have gone through the Daily Scrum Meets, Sprint Planning, and Demo Sessions among Development, Testing and Product Owner (BA) Team.
- Interacting with the BA (Business Analysts and Development team on the behalf of the Requirement Spec and end to end flow aspect.
- Initiating the Data Migration process from respective Source System to Specific Target System in the form of Tableau reporting, SFDC, NETSUIT and ECM through Informatica Power center.

Project name	Publicis marcel
Client	Microsoft Technology
Role	Technology Support Analysts
Duration	Aug 27 2018 – Mar 03 2019

Project Description:

Marcel is a professional digital assistant which is helping Publicis Groupe employees to match right talent with right opportunities at right time. So, to communicate between the peers, mail and calendaring is the most important feature which is built-in inside this mobile app leveraging outlook apis. I worked on this mail and calendaring feature where I used my domain knowledge as well as business requirement to find gaps in this module via different mediums like manual testing, calling apis from backend and engaging with developers to understand the root cause of defects. I also provided some feedback from end user perspective for email and calendaring perspective which the BA's may consider for backlog. Apart from that my work included bug validation, test execution, commenting my findings on bugs.

Contribution and Responsibilities:

- Tested the **Publicis Marcel Application** through Mobile Application User Interface and addition to this, Validated **Publicis Marcel Application on API** using **Postman, EKG and BOT**.
- Prepared the High and minute level of test cases on the basis of BRD (Business Requirement Document) and Functional Document in VSTS. Maintained traceability matrix specific to requirement, Test Case and Defect ID.
- Prepared the Test plan / Scenario /Case specific to QA and UAT releases on the basis of all the requirements and End to End flow aspect.
- Interacted with the BA (Business Analysts and Development team on the behalf of the Requirement Spec and end to end flow aspect.
- Tracked the bugs on the basis of test cases execution specific to expected and actual result.
- Tested the backend database on (Stored Procedure, View and Table) with User interface scenario.
- Inspected all the stored procedure, view and related table to track data flow of the current system on basis of user story /Requirement.
- Validated all the required Job Controllers to replicate to transaction data in Reporting form. And also analyzing the negative aspects of the job controllers on the basis of Error Code and Logs.
- Performed the GUI, sanity, regression, smoke, integration, system testing and Load testing etc. parallel to Oracle Financial Analytical application and Backend DB.
- Prepared the test scenarios and test case on the basis of Base Product level and User Stories related.
- Involved in the Test Execution related to Data Migration from Source – Target system.
- Maintained all base Requirements and related User Stories in VSTS.
- Prepared the Test Case writing and Maintaining Test Execution in VSTS.
- Raised the valid defects on the basis of functional, UI (User Interface), Backend Database and batch related in VSTS.
- Prepared the Traceability Matrices on the basis of User Stories, Test cases and Defect coverage.
- From the Prospective of Agile, Handled the team externally and internally act as an individual contributor.

Project name	GOOGLE AD Operations
Client	Google AD Service
Previous Company	GLAM INDIA PVT.LTD
Role	Audit / QA Assurance
Duration	July 17 2012 – July 30 2013

Project Description:

SHIELD Application (HR & Admin Tool) is relevant to serve internal facilitate operation of Google AD internal service on end to end process. It maintains minute information and process (Employee Data on different office locations addition to maintain their specific post & Salary, Admin related information (All the office location brief, IT Admin Information, Power Supply Unit, Power Backup facilities, All cafeteria and Health Facilities). It maintains separate module on Employee Transport Facilities, Weather related information on (Specific Office Location presence in different Country, State & Cities) & Generating the Alert messages on Various Facilities.

Contribution and Responsibilities:

- Prepared the High and minute level of test cases on the basis of BRD (Business Requirement Document) and Functional Document in ALM. Maintained traceability matrix specific to requirement, Test Case and Defect ID.
- Prepared the Test plan, Test Scenario & Use Case specific to QA and UAT releases on the basis of all the requirements and End to End flow aspect.
- Interacted with the BA (Business Analysts and Development team on the behalf of the Requirement Spec and end to end flow aspect.
- Tracked the bugs on the basis of test cases execution specific to expected and actual result.
- Tested the backend database on (Stored Procedure, View and Table) with User interface scenario.
- Inspected all the stored procedure, view and related table to track data flow of the current system on basis of user story /Requirement.
- Validated all the required Job Controllers to replicate to transaction data in Reporting form. And also analyzing the negative aspects of the job controllers on the basis of Error Code and Logs.
- Performed the GUI, sanity, regression, smoke, integration, system testing and Load testing etc. parallel to Oracle Financial Analytical application and Backend DB.
- Prepared the test scenarios and test case on the basis of Base Product level and User Stories related.
- Involved in the Test Execution related to Data Migration from Source – Target system.
- Maintained all base Requirements and related User Stories in TFS.
- Prepared the Test Case writing and Maintaining Test Execution in ALM.
- Raised the valid defects on the basis of functional, UI (User Interface), Backend Database and batch related in ALM.
- Prepared the Traceability Matrices on the basis of User Stories, Test cases and Defect coverage.
- From the Prospective of Agile, Handled the team externally and internally act as an individual contributor.

Project name	Nortel IVR APP.
Client	AVAYA INDIA PVT.LTD
Previous Company	MERCE Technology
Role	Application Engineer
Duration	May 23 2011- June 18 2012

Project Description:

Nortel IVR APP is a web-based application through we can trace IVR based voice recognition process, activity & monitored call response time span on telecom-based technology. IVR system helps to incoming callers to access all the required information on the basis of need. On the basis of improved customization, can interact with the IVR system without the help of Agent, Able to get Voice response system, Pre-recorded messages & utilization of Menu options via touch tone-based keypad selection.

Contribution and Responsibilities:

- Prepared the High and minute level of test cases on the basis of BRD (Business Requirement Document) and Functional Document in ALM. Maintained traceability matrix specific to requirement, Test Case and Defect ID.
- Prepared the Test plan, Test Scenario & Use Case specific to QA and UAT releases on the basis of all the requirements and End to End flow aspect.
- Interacted with the BA (Business Analysts and Development team on the behalf of the Requirement Spec and end to end flow aspect.
- Tracked the bugs on the basis of test cases execution specific to expected and actual result.
- Tested the backend database on (Stored Procedure, View and Table) with User interface scenario.
- Inspected all the stored procedure, view and related table to track data flow of the current system on basis of user story /Requirement.
- Validated all the required Job Controllers to replicate to transaction data in Reporting form. And also analyzing the negative aspects of the job controllers on the basis of Error Code and Logs.
- Performed the GUI, sanity, regression, smoke, integration, system testing and Load testing etc. parallel to Oracle Financial Analytical application and Backend DB.
- Prepared the test scenarios and test case on the basis of Base Product level and User Stories related.
- Involved in the Test Execution related to Data Migration from Source – Target system.
- Maintained all base Requirements and related User Stories in TFS.
- Prepared the Test Case writing and Maintaining Test Execution in ALM.
- Raised the valid defects on the basis of functional, UI (User Interface), Backend Database and batch related in ALM.
- Prepared the Traceability Matrices on the basis of User Stories, Test cases and Defect coverage.
- From the Prospective of Agile, Handled the team externally and internally act as an individual contributor.
