Project Details:

Project 1 : Education Company

Responsibilities:

This is for an education system. Entry point is Contact. From contact new form which creates Student type contact. Students hold all relevant information as input fields. Student information creation will also hold information about the Class Schedule chosen for that student. There are Registered classes in the system. From within those classes, a student can select his/her schedule and time for attending class. Courses are also available to choose from. Attendance of students is also kept in the system. After examination grade and population of transcript for each student is there. Apart from start from contact, also a quick link to register is there at the system at side menu of sales force UI.

Project 2:Non Profit Organization Salesforce Setup

Responsibilities:

Some organizations have existing websites hosted from force.com platform. Now new forms have been added to those sites. It is like an input from which creates new entries in the Salesforce internal database from the site. Say, a church affiliation site. New form creates Child information and legal guardian information with all details.

New login page addition in site and displaying step by step forms there. Organization has contact in its database. If the existing contact username

password matches, that provides the facility to log in. Or to register a new user. Then User can see all the events of the organization based on his/her profile visibility and also can fill up Profile data and operate many tables from input forms there.

Project 3: Modules Services

Responsibilities:

The project has the requirement to create custom reports (not the standard Salesforce reports) with all kinds of filter options for the customer portal users to input based on different fields. The reports will contain custom grouping (summary/sub-summary), sorting, limiting etc.

The requirement was to use custom Visual force pages and apex controllers for the reports to generate the reports with all the user input and system configuration validations.

Filters: System administrator to enter the validations in the report configuration page (different from the Report Page) according to which data will be displayed at the start up when a customer portal user clicks on the report link. Users also have the option to override the configuration done by the system administrator.

Project 4:- HT Media

Responsibilities

The project has the need to create reports and dashboards with customize. Created multiple report type according to business logic.

Also automate the process with process builder, work flow and auto response rule.

Also lead the support team in this project and implement complete Sales cloud, service cloud.

Weekly

Project 5:- Magic bricks

Worked on birthday email notifications functionality and also wrote the Test class for all the projects and did the testing. also took the requirement from client and manage some task with team members

Created all users and provide the access according to business

requirement.

Create all object fields and relationship and formula field, rollup summary field .
