## PROJECTS:

**Mini Project on E-Voting system:** It is an online voting system which is capable to deliver appropriate, less costly, fast, secure services. And it is applied to educational institutions, so system will help to minimize the corruption done by others and security measures were integrated into E-Voting. And a computer software application is developed using a PHP programming language and mysql, a relational database management system in designing a database.

**Mini Project on Screen Saver:** We have developed Screen saver a free open source, web-based lab information management system, to address the information of our small molecule and RNAi screening facility. It supports the storage and comparison of screening data sets, as well as the management of information about screens, screeners, libraries to laboratory work requests.

**Major Project On Privacy Preserved Encrypted Data On Cloud by Third Party Auditing :** The cloud user is concerned about the integrity of data stored in the cloud as the user's data can be attacked or modified by outside attacker. The Concept called data auditing is introduced which check integrity of data with the help of Third Party Auditor. The purpose of this schema is to develop an auditing schema which is secure, efficient to use and posses the capabilities such as privacy preserving, public auditing, maintaining the data integrity along with confidentiality. The new auditing schema consist of three entities: Data Owner, TPA, Cloud server. The proposed auditing schema make use of AES algorithm for encryption.
