Project Details

Project Name : Cool Bus carpool Flutter Application.

Role : Flutter developer

Technology : Flutter, Flutter SDK, IntelliJ Idea.

Back End : AWS dynamo DB Graph QL.

Description:

- Cool Bus is a carpool application where users can share the ride for common destinations.
- My role was to develop features of cool bus in the Flutter SDK and have to make sure it will run seamlessly on both the platforms (Android and iOS).
- We used AWS Dynamo db to fetch API data.
- Integrated Third party libraries like Facebook SDK in a cool bus where a user can ask his facebook friends for a ride. Users can also ask from their contacts to share a ride.
- Developed a feature where users can book a saferide for their childrens.
- We used Firebase to authenticate Users.

Project Name : Boom Nation

Role : Flutter developer

Technology : Flutter.
Back End : Aws dynamo DB Graph QL and Firebase.

Description:

- Boom nation is a job seekers application where one user can create a portfolio and share across on boom nation app.
- Boom nation app has a feature where the hiring manager will review the worker profile.
- Implemented BLOC state management feature to manage the states.
- Implemented the flutter google map plugin which will show jobs near by you.
- Implemented Dark mode theme feature.
- Developed a feature where users can see stories posted within their network.

Project Name : Ops ramp Alert Management

Role : React Native Developer

Technology : React Native Expo
Back End : Spring Boot , Hibernate.

Description:

- It is an alert management Cross platform application.
- My role was to create a React native application for alert and incident management.
- Used My sql database for storing data.
- Implemented Redux pattern for better performance and state management.
- Created a User friendly UI application with some attractive widgets and animation.
- We used Bearer Token to authenticate Users.

Declaration

I here by declare that all the particulars given above are true to the best of my knowledge and belief.
