██████████████

PROFILE	Junior developer with two and a half years of professional experience building web applications for the full stack.

EXPERIENCE

Nov 2019 – Present

Software Developer, JPMorgan Chase & Co ██████████

At JPMorgan I work in the Corporate and Investment Banking sector in an Agile environment. My tasks so far on a new application and an existing one have included:

- Creating the UI with javascript framework Ember JS to be scalable by separating into reusable components and services and managing state with a top down approach. Also used React JS in a proof of concept search page
- Implementing into Java application, REST API's, scheduled tasks, multithreading for efficiency, and the firm's internal authentication software
- Created a microservice for the backend application
- Helping create batch scripts for deployment and configuring automatic deployments, monitored deployed app with Splunk logging
- Maintaining and increasing test coverage of different modules
- Attending daily scrum meetings and documenting tasks on JIRA board

Aug 2018 – Nov 2019

Software Consultant, Revature LLC ██████, VA

As a consultant for Revature, I worked on its internal apps and then developed for the client JPMorgan Chase. Some experiences I gained during training include:

- Creating a stock market Angular web app, hosted on an AWS S3 bucket
- Adding email password recovery feature to the ride sharing app used for Revature

EDUCATION

March 2018

University of California, Davis *B.S. in Computer Science*
