## PROJECTS

### PROJECT - 3:

**Role:** Developer

**Description:**

The client is a huge Event Management company which is based in the USA. They are in the market for the last 70 years and have grown year by year. As they have 100s of Events going on in the world and for that, they prefer salesforce for further growth of the business and Good Quality UI for their customer. They use various standard objects like lead management, case management and ensure quick solutions to customers as well as business growth. We have used many custom objects, automation, and custom code used like APEX, VFP, and Lightning Web Component in this project.

**Responsibilities:**

- Involved in gathering and analysis of business requirements and then effectively took part in sprint planning to achieve the requirement.
- Analyzed the business process of the client and then involved in creating the application and data model required for the requirement.
- Creates custom applications, objects, tabs, fields with the custom functionality to efficiently meet the business requirement.
- Defined lookup and master-detail relationships on the objects and created junction objects to establish connectivity among objects.
- Worked on Assigning creating Roles Hierarchy, Profiles, and Security setup within the organization.
- Responsible for setting up Field Level Security.
- Implemented Field Level security for sensitive data holder fields.
- Involved in Working with Standard Salesforce features like Objects, Workflows, Record Types, Page layouts, Workflow Rules, Profiles, Roles, Reports and Dashboards, etc.
- Developed Apex Class, Trigger, and Batch Apex Class for the custom object.
- Involved in Unit testing for Apex Class, Trigger as well as Batch Apex Class and get 75%+ coverage.
- Developed Lightning Web Component Interface with custom HTML elements, built using HTML and modern java script.

## **PROJECT - 2:**

**Role:** Administrator/Developer

### **Description:**

The client is a big and high-profile Education group in Canada. As they offer various courses in their institute that they update their teachers and lecturers with new technologies. For that, they regularly conduct conferences throughout the country and for that they want us to develop a conference management interface for the employee of the educational group.

### **Responsibilities:**

- Understanding of complex requirements of projects and being a part of brainstorming sessions for providing solutions.

- Created a custom App, Object, Tab, Field with custom functionality for the conference management interface.
  - Involved in creating the number of users and giving the permissions in Profile, Permission Set, Sharing rule, and security in Roles.
  - Involved in setting up field level access for each custom object created
  - Establish Lookup and Master-detail relationship between the custom on the objects and created junction objects to establish connectivity among objects.
  - Created Apex classes, Controller classes, and trigger on custom object keeping in mind SFDC governor limits.
  - To fetch the record, SOQL query is used and to modify like insert or update DML is used.
- Integrated Email with Salesforce.com for mass E-mail management and designed various custom E-mail templates
- Involved in the Data Transformation and Data Cleaning activities while transferring the data to the external system using informatics.

## **PROJECT - 1:**

**Client:** ALL CNI

**Role:** Developer

### **Description:**

The main theme of the project is to save energy by giving rebate to customers upon installing highly efficient energy saving machines for all the clients across Canada, US (WV, MD, IN).

### **Responsibilities:**

- Interacting with clients for gathering requirements related to CR/Enhancements to implement on Salesforce with a technical insight.
- Working on sites and built new visual force pages as per the client ask and modified existing functionalities to add measures
- Optimizing the existing classes to avoid 101s and CPU time limit exceed errors.
- Using salesforce automation processes- Work flows, Process builders, Approval processes with relevant templates in notifying the concerned people to get the work done without time lapse.
- Used SOQL & SOSL with consideration to Governor Limits
- Optimizing the overall org code to increase code character limits

- Extending support during SIT, UAT & Prod.
- Working on Salesforce Deployments using ANT migration tool.
- Developing Visualforce pages as per the Business requirements.
