Below Legacy applications based development and support

Platform: Java, ASP, VB
Domain: Automobile
Duration: 4 + Years
Tools Used: Eclipse, Crystal Report, Linux, shell Script, SQL Sheduler
Skills: Struts, Spring Core, REST API, SQL, Oracle, batch jobs

1] PVOS (Precesion Vehicle Operating System) Distribution Sales Logistics

PVOS is designed to be a generic application that serves the purposes of distribution, sales, logistics and quality i.e. an all in one application. The application has been designed to be generic in that any brand or NSC can be plugged into the application and begin realizing the benefits in a short turn around period. PVOS provides JLR NA with real-time vehicle tracking and management reporting from loaded on vessel Europe thru car delivered dealer thus improving overall efficiencies in delivery performance, quality and customer satisfaction.

Handheld is a external hardware device that is used by Port Processor team while there is network connectivity available at port. PVOS application also work on this device to perform the Port Activities (Silhouette marking, Apply hold, Print Monroney Labels, Keep the vehicle offline etc).DPOE check

2] Monroney & MTT (Monroney Transaction Tables) are subsystems

MTT is staging to production data entry application, which takes the input from SAP application, it varies as per US & UK codes. It facilitates user to check & Correct the vehicle options specific UK – SAP & US codes.

Where as Monroney and CO Certificates of Origin are the legal documentation required to be get printed on the every new car before sale to dealer and respective customer. It varies between US & Canda.

3] BBSS (British Brands Sales Suite) Marketing and Sales

BBSS application is a portal for Jaguar and Land Rover North American dealers. The application is suite of tools to support new and pre-owned Jaguar and Land Rover vehicles, sales, incentives, extended warranty and trades.

Payment Services Directive 2 (PSD2), is set to change the payment services landscape for established banks. PSD2 requires banks to provide third-party providers with access to their customers' information, through open APIs (application program interface). Aiming to drive innovation, transparency and competition for the benefit of consumers, the directive requires European banks to open their infrastructures to third-party providers while ensuring adequate security

Major Contribution

- Solution Design and Regular Scrum drives.
- Inter-team co-ordination
- Driving Integration projects
- Driving release management
