WORK EXPERIENCE

Technology Consultant

Deloitte Consulting US-India Private Limited

Hyderabad

Working as an **Oracle Certified Big-Machines Oracle CPQ Cloud** consultant on CPQ extensions. I have **successfully worked on 6 end-to-end CPQ Cloud project** implementations. The implementations broadly encompass importing quote opportunity from Oracle Sales Cloud (CRM), preparing the Quote for parts for the customer and then pushing the approved quote to the Order Management System for creating an order.

- Extensively involved with the configuration, commerce and inbound and outbound integration with Oracle Sales Cloud (CRM).

- Have rich experience in working on Configuration Layouts, Array Sets, Table Based Recommendation/Bulk Look Up Recommendation Rules, Recommendation, Constraint and Hiding rules as well as process flows.

- Have extensively worked with BOM product models, defining BOM hierarchy for product models with the help of the BOM Tables (BOMItemDefinition, BOMItemMapping, BOMAttributeDefinition and BOMAttributeMapping).

- At the Commerce side, have varied experience in working with Transaction and Transaction Line level processes, including Validations, Constraints and Hiding rules, Attribute mapping, Actions and Library functions and JET UI. Have also experience in writing custom XSL for spreadsheet generation from quote. Very proficient in working with BML and BMQL. Also, versant with BMQL Transaction scenarios. Very proficient in working with BML and BMQL and performance optimization on BMQL queries.

- In the Developer tools, have worked with Data Tables, defining foreign key between tables, importing and exporting data. Also worked on Util Library functions for implementing modularity of code across the system.

- Have also worked with Document Designer and Email Designer for generation of Commerce documents in PDF format and for defining format for Email Approval Templates.

Technology Consultant

10/2018 to 03/2019
Oracle India Private Limited
Hyderabad

Working as an **Oracle Certified Fusion Middleware** developer, worked on the implementation of tax calculation under the Financials Taxation module, managing tax calculation from the source shipments to the Fiscal document generation for the final delivery. Also worked as a **CPQ consultant** on a parallel project involving Oracle Configure Price Quote for creating custom configurators for the Client and order creation for the quotes from Commerce.

Responsibilities Shouldered:

- Development of Manage Shipment and Manage Fiscal Document Generation modules of the Financials Taxation application using ADF business components. Working with Root and nested application modules, Entity Objects, View Objects, View Links, Task-flows (Unbounded and Bounded), Routers, Managed Beans, JSF and JSP.

- Custom skinning of the pages of the applications using custom style sheet and selectors to give a premium look and feel to the application.

- Error handling in the application from the Model, Controller and View layers.

- Merging of developed code using source control as Oracle Advanced Development Environment (ADE).

- Developing custom Oracle CPQ configurator (catalog) for items, pushing the catalog to commerce and subsequent order creation from the quotes.

- JUNITS automation for Manage Fiscal Document Generation module.

Oracle Fusion Middleware Consultant

11/2013 to 09/2018
Tata Consultancy Services Limited
Kolkata

Worked as an **Oracle Certified Oracle Fusion Middleware** developer involved with the development of Inventory and Pricing modules of the enterprise applications using ADF business components. Worked with Root and nested application modules, Entity Objects, View Objects, View Links, Task-flows (Unbounded and Bounded), Routers, Managed Beans, JSF and JSP.

Responsibilities Shouldered:

- Intensive Client interaction for understanding and locking the business requirements.
- Point of Contact from my team owing to my excellent communication skills.
- Single-Handed build of all the mockup screens with ADF faces components in JSF pages to give client an actual look and feel of how pages will look in ADF. Mocked up 12 ADF screens.
- Prepared the MD70 for the ADF design specifications, business logic and high-level approach.
- Prepared the Low-Level Document for all the screens mentioning the use of application module, task- flows, details of entity objects, view objects, managed beans, package structure and the overall application structure.

- Did a number of POCs including successfully invoking EBS API exposed as a rest service from ADF.
- Have been a part of effort estimation for the ADF requirement.
- Building the application on Oracle ADF framework with a highly user interactive UI.
- Using J2EE for backend support of the application and implementation of application code modularity and reusability in the application.
- Error handling in the application from the Model, Controller and View layers.
- Custom skinning of the pages of the applications using custom style sheet and selectors to give a premium look and feel to the application.
