Projects :

MyCareSpot:

An All-in-one telehealth collaboration platform designed to make healthcare providers work better and more efficiently.This project was developed to make healthcare providers work efficiently.

Role: Worked as Senior resource on Patients/Providers module
Technologies: Nodejs, MongoDB, NestJS, Angular, TypeScript

NSmiles: Mental Healthcare

This application helps them to interact with mental health experts to overcome stress,anger and sadness.This project enables the users to enter their health related inputs which are asked through a list of questionnaires which evaluates the current health condition of a user.
Role: Worked as Senior resource on Online Consultation and User Evaluation
Technologies: Nodejs, MongoDB, Angular, TypeScript, SailsJS

Great Value Storage: Storage Space Renting

This application provides affordable and convenient storage solutions.The goal of this application is to take the stress out of customers' moving experience by helping to make your decisions easy.This application helps customers pay their bill online by logging in from anywhere on any device.
Role: Development of Business storage module and personal storage module.
Technologies: Nodejs, ReactJS, MongoDB, ExpressJS, JavaScript

Nexzentek: Resource Management Application

It acts as a Consultancy from where consultants are recruited and placed in different client locations.Based upon the requirement, it directly interacts with the client or interacts through a

Prime Vendor.This application is built using MEAN Stack.This application caters its services to various other Consulting Agencies with the similar business need.

Role: Worked as Senior Resource on consultancy and resource modules
Technologies: Nodejs, TypeScript, Angular, ExpressJS, MongoDB

Shomee: Real Estate

This project provides a platform that allows Property Owners to add one or more properties with various property types, facilities available in each property and offer them for Rent/Lease and buy.Buyers can search as per their requirement and book the specific property for self or nominees. Owners and Tenants can exchange information through instant messenger, plan for visits and finalize the deal.

Role: Worked on major modules as senior resource.
Technologies: NodeJS, ExpressJS, Angular, MongoDB

MirrorX : Mirror IoT Application

This Web application is built with Node.js,Javascript, and Sockets.This app is basically a one-way mirror made "smart" by simple LCD display which sits behind the mirror and display white UI elements with a black background.This has facial recognition capability which personalizes the mirrors display based on the individual in front of it.

Role: Worked on facial recognition, personalization of user data, email and mobile notifications of the user.
Technologies: NodeJS, ExpressJS, Angular, MongoDB

DECLARATION :

I hereby declare that all the information provided above are true, complete and correct to the best of my knowledge and belief.
