KEY PROJECTS

Air Pollution Detection System Using IoT. - The level of pollution is increasing rapidly due to factors like industries, urbanization, increasing in population, vehicle use which can affect human health. IOT Based Air Pollution Detection System Using IoT is used to monitor the Air Quality over a web server using Internet.

Smart Agriculture Application - India is an agriculture dominant country. Agriculture sector's net share in the country's GDP is 17.12%. Hence, the dessimination of information to the farmers at the time when it is required becomes very important. With the widespread availability of smartphones and Internet, there is a huge potential for supplying essential information via means. This paper presents the overview of mobile apps targeted to the agricultural sector currently available in Google Play Store, Android Operating System. In addition, a solution of the given problem is designed and presented in the form of an Android application- Kisan Sevak. The paper also discusses the scope of the discussed applications and what improvements must be made in order to make them reach to a wider audience.
