Projects

Project 2 -> Internal

Technologies -> Salesforce CRM

Duration -> April 2022 – May 2022

Role -> Senior Developer

Team Size -> 5

Project Abstract –

We created an asset to process payments in Salesforce by integrating with most popular payment gateways (Stripe, Paypal, Authorize.net, Quickbook)

User can process payments in Salesforce via entering card or bank details which will be sent to appropriate gateway configured in the system.

Responsibilities-

- Setup error logging framework.
- Setup custom configuration page for storing credentials in custom metadata.
- Involved during development and unit testing of module.
- Worked on apex class and batch classes.
- Integration with Authorize.net
- Involved in bug fixing

Project 1 -> Manufacturing Client

Technologies -> Salesforce CRM

Duration -> August 2021– March 2022

Role -> Senior Developer

Team Size -> 6

Project Abstract –

We created a full page custom LWC application for Sales Team of client to provide better UI/UX experience. In the application we added menu items like Dashboard to see target achieved, recommendation for sale suggested for them etc.

Responsibilities-

- Setup recommendation engine in the project to notify users on expiring product lifecycle or services.
- Used platform events to show notifications to each user about recommendation records assigned to them.
- Created multiple LWC components as part of user stories.
- Created a custom solution to calculate target achieved by each user and their managers by rolling up amount upwards in manager hierarchy. Created a custom solution for sending consolidated email to user rather than sending multiple single notification.
- Integrated with external application (Customer Portal) with Salesforce using custom and standard API (Inbound).
- Reviewed code of peer developers.
- Involved during development and unit testing of the module
- Involved in support phase of project.
- Involved in grooming of junior resources in project.
- Actively participated in technical design discussions and implemented same as part of user stories.
- Deployed all the metadata using ANT.

(Previous Organization Projects)

Projects -> US Client

Technologies -> Salesforce CRM

Duration -> March 2016 – May 2021

Role -> Developer/Team Lead

Responsibilities-

- Setup trigger framework.

- Managed multiple teams to successfully deploy 11 sprints and fix asset bugs in parallel
- Involved during development and unit testing of module.
- Preparing estimates, cadence, and capacity planning.
- Plan work items, prepare risk mitigation strategy to ensure project remains on track.
- Analyzed and improved their existing functionality by implementing same via configuration and migrated rest into standard object.
- Developed test classes for apex classes and test coverage for Triggers.
- Converted client requirements into technical designs and implemented same in salesforce.
- Implemented triggers on multiple objects.
- Dashboard presentation to client.
- Streamlined deployment process by documenting the activities and standards (Cut Over Plan , Deployment Runbook)
