Having a knowledge of Sales Cloud and customisation in Lightning as well as Classic interface. Apex , trigger , visual force Page. lightning , Salesforce classic. able to write SOQL queries and SOSL queries.

Willing to relocate: Anywhere

WORK EXPERIENCE

Senior Associate Consultant

Infosys SEZ Campus - February 2020 to

Present

I am working as a Senior Associate Consultant for Infosys.

It is a customised application which uses lots of different custom objects.

I am working on Merger project which uses Visualforce pages and apex for UI and backend.

Which makes it usable in both interface that is lightning as well as Salesforce classic.

This project uses dynamic approach for which a separate query object has been created from which query is getting fetched . And a separate Exception handling mechanism has been developed which makes the system to generate CSV files which consists of the objects records which got failed while getting inserted or updated along with the error message due to which it got failed to get saved . Dynamic function is used of type Subject through which any type of object records can be saved.

Salesforce Developer

SLK SOFTWARE Private Limited - Bengaluru, Karnataka

August 2018 to February 2020

I worked as a Salesforce Developer for a client named Global Experience Specialist(GES). It is a show organisation company which organises shows at various places.

This application is based completely on lightning experience. It is a customised application where I was handling custom objects named - GES Show , GES Order , Show Team Member.

Ges show consists of all details regarding a particular show.

GES order consists of details of order which is helpful for conducting a show. It is linked as a master detail relationship to Ges order.

Show Team Member is a junction object.

It consists of all the details of the users of the show.

It is linked to GES show and User Object through lookup relationship.

Salesforce Developer

SLK Software Pvt Limited - Bengaluru, Karnataka

June 2017 to June 2018

I worked as a Salesforce Developer for client named Emerson.

It was a product advisor application which suggests user the best flow meter , primary element etc based on the inputs provided by user. Ex :- pressure , temperature , ambient temperature , pipe length , pipe diameter , flow of direction.

This application uses a rigorous calculation which is accurate up to 14 digits after decimal.this application is mainly based on the calculation running logic.
