**Infosys Limited**

Nov'18 – Jan' 20

Location: Bangalore, India

Role: Salesforce Developer

- Worked on both Screen and Auto launched flows.
- Integrated the lightning flow with REST API calls using Apex invocable classes to make the data from external application available for flows at the run time.
- Developed the auto logging capabilities in flows to capture the events from each flow screens with dynamic date time stamp.

- Created lightning components for flow screen elements like Radio button, picklist and flow footer for achieving auto logging solution from the flows.
- Migrated the code from Dev sandbox to higher environments using both Change sets and GITLAB using Force.com and GIT IDE plugins for eclipse.
- Set up the development sandbox for the client business and provided training on SFDC Flow Builder change set migration.
- Worked on salesforce Knowledge to migrate the existing knowledge base to SFDC.

**TATA Consultancy Limited**  
 Nov'15 – Oct' 18  
 Location: Bangalore, India  
 Role: Salesforce Developer/Analyst

- Developed custom applications for client management and user management.
- Data migration from external systems to sales force using Data Loader. Created different Workflow rules and Approvals for various automation processes.
- Designed, and developed the Custom objects, Validation rules, Page layouts, Custom tabs, Components, Visual force Pages to suit to the needs of the application.
- Designed, developed and deployed Apex Classes, Controller Classes and Apex Triggers for various functional needs in the application.
- Performed detailed analysis of business and technical requirements and developed the Apex classes using other Platform based technologies like Visualforce, Force.com IDE.
- Developed and configured various Reports for different user profiles based on the need in the organization.
- Created email templates for the clients and customers.
- Participated in the training sessions provided by the Salesforce team and support end users
- Migrated the different applications from Lotus Notes environment into Salesforce platform for the client.
- Involved in Salesforce Application Setup activities and customized the applications to match the functional needs of the organization.
- Interacted with various business team members to gather and documented the requirements. Implemented the requirements on Salesforce.com platform and Force.com IDE Plug-in using Eclipse.
- Closely worked with SalesForce.com consultants while implementing the solutions for the requirements.
- Designed, Implemented and deployed the Custom objects, Page layouts, Custom tabs, Components to suit to the needs of the application.
- Created Custom Objects and defined lookup and master-detail relationships on the objects and created junction objects to establish many-to-many relationship among objects.
- Created various profiles and configured the permissions based on the organizational hierarchy requirements.
- Customized tabs for different business users' groups and business centres. Provided the training to the internal business users to use the application and develop their own custom reports.
- Used the sandbox for testing and migrated the code to the deployment instance after testing.

## Accomplishment
