Projects

Veracross

- Veracross is a cloud-based software platform designed specifically for independent schools.

- It provides integrated solutions for school administration, including student information system (SIS), admissions, enrollment, academic planning, grading, communication, and more.

- It aims to streamline school operations, enhance communication between administrators, teachers, students, and parents, and facilitate efficient management of various school-related processes.

Startup Funding system

- It aims to help startups to find early-stage financing. Our main product is the Leapfunder convertible note, a standard approach through which early-stage companies can be financed. Via Leapfunder anyone can become an Angel investor. An investment can start from €1.000.

- It is a Dutch company, based in Amsterdam. The founders jointly have decades of experience with early-stage investing. It does not give investment advice.

Tratoli

- Tratoli is a travel tech startup based out of Mumbai. They are a smart travel planning platform for holidays of international destinations as well as popular destinations.
- I worked as a front ender in this project. Technologies. My role was to write various react components for their pages, use their api's to render the desired component. Tech. stack for me on this project was react, redux and react routers.

Equity Multiple

- Equity Multiple is transforming real estate finance, creating a more efficient, accessible, secure market for institutional quality real estate finance.
- It is a US based project built using Ruby on rails, react, html, css, js. There were high standards of coding.
- I worked as a full stack developer and was responsible for delivering the tasks given to me and attending client calls every day.
- Had implemented many features single handedly in this project. https://app.equitymultiple.com

Music Mayhem

- Music Mayhem is used for playing music games.
- It is basically used to organize musical events at various functions.
- Worked as a full stack developer. Implemented active admin (a ruby gem) for designing powerful admin interfaces. I am responsible for implementing any new feature that comes to us from Jira (A project management tool).

Dashi

- Working as a lead developer on this US based project. Dashi is a platform for uploading, sharing and analysing the business docs.
- This is built on node.js, React.js and Material Ui framework. We are using MongoDb as the database for dashi.
- Also created a microservice app in rails for dashi that is used to convert the documents (.doc, ppt and pdf) into images, upload them on an s3 bucket and store their urls in database.

Oddup

- The startup rating system (Hong kong Based). The system is designed to help investors to make an informed investment decision with data rating and a viewpoint and get best odds of investing in a right startup.

- The project is built on ruby on rails , javascript,html and css. My role was as a developer. Implemented stripe payment gateway in this project. https://www.oddup.com/

Hotel Aggregator

- Worked on this project during my internship(Akaruilabs India). Started this one from scratch. This was built using Node.js, Express.js and mongo db.
- It basically used an Expedia api to book live hotels all over the world. I used passport for authentication. It was my first project in open source technology. I was one man army in this project. Finally I showed this project in my college for my degree completion in MCA.
