- **Scripting language** : JavaScript, Knock Out JS

- **Data Visualization** : Tableau
- **ETL Tools** : SSIS
- **CMS** : Umbraco
- **Version Control** : TFS, Jira, ServiceNow

## PROJECT SUMMARY

### 1. Selector Pro

It is a web application which is used globally in engineering system domain to calculate or analyze the different types of pump pressures for the mining process with the help of curve data and with user entered specific details

### 2. Community Health Plan of Washington

CHPW is an internally developed tool and is outsourced to US Healthcare. It is inclusive of four separate portals which are interlinked. It helps users to locate medical services available as per their Geolocation and their need. It maintains the medical history of countrymen and their healthcare provider which makes the process easier to apply for medical claims and its transactions.

### 3. Promotion Tool

Promotion tool is developed to have a smooth and transparent promotion process experience for all the teams across all levels in Capgemini India. Removing the manual intervention thereby avoiding any miss or error at any stakeholder's end. Also, to have a platform to integrate all the data points from various sources and to have one reference point for all teams.

### 4. Digital Cockpit and Talent Management

Talent Management deals with the data for yearly objectives/goal settings activities for the Capgemini in India whereas Digital Cockpit deals with the mandatory course record manipulation, which is, course completion status by the employees in Capgemini across all levels.

### 5. Global Risk and Compliance Access Controls

Facilitated FMCG client for preparing and setting up the Global Financial Control Framework across several countries for PTP, RTR and OTC & MTD process which resulted in 30% of audit cost saving for client.
