Brief summary of most recent work experience: (May 2020 - Till date)

Working with RIA ADVISORY LLP, Pashan Highway, Pune.

Currently working in Company's Infrastructure team, as a Senior Consultant.
Started working with INFOSYS LTD. since May 2015 for a short period of time. Then I decided to move to OFSS and joined there in May 2016. I have started working with Performance Tuning team and then moved to development side with OBDX project. Total work experience of around 5 years, working in different Job roles, started of as Systems Engineer and moved into Staff consultant till April 2020.

A BRIEF SUMMARY OF TECHNICAL SKILLS

- Good understanding of working in Banking domain as I was working as Staff Consultant with OFSS. My role was to implement and do full stack development as per client's requirement. I had been managing one of the Client for almost 10 months. We were using REST framework at the backend and KnockoutJS in frontend for developing components.
- Good understanding of Agile Methodology and the DevOps culture, also familiar with the DevOps tools, have worked in sprints of 2 weeks to meet the acceptance criteria of the user stories towards automating our regular work.
- Proficient enough working on LINUX (RHEL) and Windows. Capable of writing Linux bash scripts and administering Linux based environment as well as windows servers in which our DB and webapps are hosted.
- Basic understand of SOA composites, BPEL process etc.
- Implemented various CI/CD/DevOps tools.
    - ➢ **Jenkins:** Have worked on creating various Jenkins jobs for our project, Capable of setting up and administering Jenkins, managing Jenkins users setting up role-based access control for the Jenkins user. Creating pipeline jobs integrating with GIT and AWS EC2 using which we were triggering deployment jobs etc. Have used groovy in pipeline script.
    - ➢ **Ansible:** Capable of setting up ansible and have writing ansible playbooks and Roles to carry out deployments via ansible.
    - ➢ **AWS:** Have used AWS services like EC2, S3, VPC, RDS, Route53, Lambda, CloudWatch.
    - ➢ **Git:** Have used GitHub and bitbucket for source code management.

➢ **Jira:** For request / issue tracking and management.

Other Important tools used besides the above DevOps tools include

➢ **MS SQL Server:** Have extensively used Microsoft SQL Server 2008 R2, 2012, 2016 to manage and client databases, have created client database, carried out activities like back up restore, create stored procedures and alter stored procedures, carryout the DML operations. Troubleshooting deadlocks and issues like long running transactions, high CPU, memory etc.

➢ **Weblogic server:** Have been managing and using Weblogic since past 3-4 years. Good understanding of setting up deployment process in Jenkins. Also, I had a good experience with setting up Foreign server, JMS Queue, Active Directory, Custom SSL, SOA, MWM etc. I have also automated user creation process in Weblogic using Jenkins

▪ Networking knowledge and a good knowledge of Middle tier and how it functions, load balancers, proxy servers, LDAP servers and federation service etc.

▪ Management skills systematically inculcated right from the mother institution, capable of taking ownership and responsibilities and fulfilling is part of the aptitude. A Leader, a better team player and a good listener capable of working under minimal supervision.

▪ Ideated lot of improvements and alternates to our daily business as usual, capable of recognizing unhealthy work practices and taking necessary initiatives to mitigate the time involved in accomplishing it.
