PROJECTS

Class Management System

(November 2019 - March 2020)

- This project is designed to be used by class management system.it is an online system through which student and faculty see their information.
- Admin dashboard can provide information , feature and overview of faculty staff and student .Admin has all the control above student and faculty staff. Admin can add or manage student faculty detail and many more
- It's easy to operate and understand by user. the design is pretty simple and user won't find it difficulty to understand and use .
- For a given register /staff/student(technical/non technical) can register and they can access the system to either upload or download some information from the database
- There are three modules in this system student ,faculty and admin
- Admin can login, add, update,delete, add material ,view query manage everything.

E-commerce Website

(June 2019 - October 2019)

- This project is design to be used by client for buying product over internet . It is an online platform where we can buy anything from sitting anywhere all over india.
- Admin dashboard provide information overview of product and stock detail. Admin can update stock Quantity or remove product from website.
- Their are two modules used user registration and admin.
- user have to place order then admin will approve that order and user get unique id to track his order.
- its hard to maintain payment database so we only added cash on delivery payment option only
