SALESFORCE DEVELOPER

2.5+ years of experience in Salesforce development and configuration in Salesforce Lightning, Salesforce Financial Services Cloud. Experience in Salesforce Integration with third-party systems using an Apex based framework, Apex Triggers, Batch Apex, Lightning Components.

- Good grasp of coding best practices in Apex as well as Lightning.
- Experience in development of various re-usable and generic components/assets.

SKILLS

- Apex Programming
- Aura Components
- Sales Cloud
- Financial Services Cloud
- JavaScript

PROFESSIONAL EXPERIENCE

Accenture Services Pvt. Ltd.   January 2018 - Present
Application Development Analyst

- **Implementation of a generic re-usable asset:** A generic and re-usable asset was developed which is now being used in Salesforce Practice at my current organization. It aims to reduce the initial time at the start of a new account/project where the setting up of objects/permissions and other administrative tasks is done. This implementation was done as a part of my contribution for the organization other than my project deliverables.

- **Project 3 - Implementation of custom Data Loader using Batch Apex :** Currently working in a project that aims at a complete CRM implementation for a banking client based out of India. Our goal was to handle the upload of 50,000+ records on an object and have a log recorded for each of the record which is inserted/updated. Other than this, various other implementations were done which included creation of custom lightning components, Integrations with third-party system and using standard out-of-the-box administrative features such as Process Builders, Workflows etc.

- **Project 2 - Implementation of callout based search functionality:** This was done for a *Retail Banking client based out of USA*. It was a demographic screen that included various custom validations in lightning and fetching data from a third-party system based on the search parameters. Other implementations in this project included setting up of permission sets, profiles, workflow rules, formula fields and validation rules.

- **Project 1 - Implementation of Apex Frameworks:** This was developed for a *USA based Banking client* wherein the development as well as implementation was done for the Apex Frameworks to enforce code optimizations and best practices. These included Trigger Frameworks, Integration Framework and Domain-Selector Framework for writing SOQLs. A few administrative implementations were also done to carry out small calculations such as workflow rules, process builders.

Center for Railway Information System   January 2017 – June 2017

Trainee – Training Information Management System

Requirement gathering and requirement analysis was done. I was responsible for designing and developing the User Interface and other front-end requirements using HTML/CSS and Java. As a part of backend work, Java database connectivity was done.

MCA Final Year Project January 2016– May 2016

Food Management Application

Developed a hybrid mobile application in AngularJS, HTML/CSS. Used JSON for database connectivity and the application was independent of the platform (Android/iOS). I was responsible for development of user interface and navigation among various screens.

EDUCATION & CREDENTIALS

Masters in Computer Application
Banasthali University, Jaipur, Rajasthan

Bachelors in Computer Application
Banasthali University, Jaipur, Rajasthan

Diploma in Computer Hardware & Maintainence
Banasthali University, Jaipur, Rajasthan

SVM Inter College, Muzaffarnagar, UP
Secondary and Senior Secondary Education (UP Board)

Certifications:

Salesforce Certified Administrator (ADM-201)
