Roles and Responsibilities:

- Design**,** develop, and maintain APIs using API management tools and technologies.
- Implement security and authentication mechanisms for APIs.
- Test and validate APIs for functionality and performance.
- Collaborate with API publishers and API consumers to ensure successful API management.
- Debug and troubleshoot API issues and provide technical support.
- Participate in code and design reviews to ensure quality and maintainability.
- Review and approve code changes before they are committed to the code repository.
- Ensure code changes adhere to coding standards, best practices, and organization-specific guidelines.
- Provide feedback and guidance to developers on how to improve code quality and maintainability.
- Ensure code changes are properly tested and validated before being committed to the repository.
- Collaborate with other stakeholders to ensure code changes align with business and technical requirements.
- Monitor code changes to detect and resolve conflicts or potential issues.
- Provide training and support to developers on how to effectively contribute code to the repository.
- Ensure APIs adhere to security, compliance, and governance standards.

Project: NEST (National Employment Savings Trust), 14 Months

Nest is an online pension scheme that was

set up by the government to make auto-enrolment as simple as possible. Auto-enrolment was introduced by the government in the Pensions Act of 2008. Nest Corporation, the Trustee that runs the Nest scheme, is a public corporation. It's accountable to Parliament through the Department for Work and Pensions but is generally independent of government in its day-to-day decisions. Being a public body means that we have no owners or shareholders. As a Trustee, we run the scheme in the interests of our members. There are three main types of pension in the UK. By knowing the basic features of each type, in a better position to, understand customers, and savings and plan properly for customers future.

Environment: Azure Integration APIM, API gateway, Developer portal, GIT Lab

Oct 2020 - Jan 2022

Software Engineer

Monocept Consulting

Aditya Birla Health Insurance endeavors to partner with the journey towards a healthy lifestyle. In today's times, where technology has brought tracking of our health to our fingertips and medical science has solutions to complex diseases, we at ABHI bring innovative health insurance products that come with an entire ecosystem to take care of health. The driving force behind our progressive services is our purpose statement "To Empower and Motive Families to Prioritize their Health and Live Fulfilling Lives.

Environment: C# .NET, Micro Services, .NET Core 3.1, Azure, Azure Devops, Azure SQL

Apr 2017 - Jul 2020

Software Developer Associate

Processweaver Software Solutions

As a part of the **Carrier integration Team** brings fulfillment processes and shipping data together. It is about integrating your ERP system directly with those of your preferred carriers so that they talk directly to each other.

Roles and Responsibilities:

- Integrated and Develop upcoming New Shipping Carriers to the Exiting Solution as per Client requirements, the integration and Development as done. As well as labels Preparation.
- The Existing carrier issues resolving And Modifications.
- Maintained the existing applications, and designed and delivered new applications.

- Developed code Fixes and enhancements for inclusion in future code releases and patches.
- Integrated live, virtual, and constructive programs into a cohesive product.

Project: XCarrier Integrations, 39 Months

Carrier integration brings your fulfillment processes and your shipping data together. It is about integrating your ERP system directly with those of your preferred carriers so that they talk directly to each other.

It is a streamlined process whereby shipments can be automatically booked, then the shipping labels are printed, and tracking numbers are originated and managed.

Electronic Data Interchange (EDI) - Computer-to-computer exchange of business documents in a standard electronic format (file feed) between business partners.

Application Programming Interface (API) - A software intermediary that allows two applications to talk directly to each other instead of through a file feed.

- Order Placement
- available rates retrieval
- choice of carrier
- label generation
- locating the parcel by scanning the label
- storing data in the carrier's tracking system
- Retrieving data via API to enable shipment tracking from a third
- party's side.

Environment: VB.NET, C# .NET, ASP.NET (Web Services)

Project: ETT Jobs, 15 Months

Carrier Jobs Run by Task Scheduler. These jobs provide the Track and Trace by the EOD or when the Tracking status changed. Here we use SFTP or FTP communications based on the Carrier provided.
