Summary

I'm a Full Stack Developer with 4.5+ years of experience who loves breaking and making web applications. My objective is to work in a professional, work-driven firm where I can apply my knowledge and skills to grow.

Experience

Software Engineer
Talentica Software

Sep 2019 - Present (1 year 8 months +)

I am currently working on an enterprise application called Concerto (https://www.realization.com/). It is used to manage large scale complex projects using CCPM (Critical Chain Project Management).

• Worked on enhancing the existing application as per the business requirement and integrating some parts of it with AWS SNS and AWS SQS. Refactored and Improved the design of existing codebase.
• Worked on creating a MVP for Android and iOS in React Native as a POC and integrated it with existing systems.
• Currently working on migrating the front-end of planning app from legacy ExtJs to React along with Redux.

Software Developer
Ash Software

Dec 2018 - Aug 2019 (9 months)

I worked on Villa Plus - A travel and villa booking portal from the UK - (https://www.villaplus.com/). It provides leased holiday villas across west europe in Spain, Italy, Greece, Portugal and France etc.

• Along with the UK Team, worked on developing new REST APIs based on microservices architecture using Best Practices (In .Net Core) (Earlier it was a giant Monolith).
• Initiated to remove database logging and migrated to better Application Insights logging on Azure.
• Improved the reliability of the overall application using Application Insights data to focus on the issues which are more important to fix.

Programmer Analyst
Cognizant

Oct 2016 - Dec 2018 (2 years 3 months)

I Worked on developing and enhancing an internal application used by project managers and above level associates to track the entire lifecycle of projects, from bidding to delivery to the client and the costs and revenues associated with it.

• Migrated a very old application (From ASP.Net Rainbow Framework - To .Net MVC 5).
• Initiated to move the newer development to Angular 4/5

• Automated many daily repetitive tasks using Windows Service and SQL Jobs

Education

Birla Institute of Technology, Mesra
Bachelor of Engineering (BE), Computer Science and Engineering
2012 - 2016
CGPA: 6.93

Licenses & Certifications

Mastering React - By Mosh Hamedani - Code With Mosh
cert_q5tdw5w3

Front-End Web Developer Nanodegree - Udacity
https://graduation.udacity.com/confirm/Q2QF4345

Skills

C# • JavaScript • TypeScript • .NET Core • Microservices • React.js • Redux.js • SOLID Design Principles • Design Patterns • Front-end Development

Honors & Awards

SPOT Award - Talentica Software
Apr 2020
We didn't have a push notification system in our software before, I came up with a good solution of implementing SNS and SQS in our software (Concerto) for the notification module. Integrating with AWS has not only made the solution scalable for the customers using it, but also has now opened new avenues for development. Concerto is currently integrated with different other softwares (Like Jira) for different customers as messaging/notification to/fro third party through SNS and SQS will be easier and scalable.
