Work Experience

- US Tech Solutions as a software engineer. Have been outsourced to Cerner India since November 2020.
- Retail Insights Consultancy Private Limited as JavaScript Developer. Had been outsourced to Decathlon since December 2019 to November 2020
- Applied Standards and Innovations as UI Developer using the above-mentioned relevant skills from January 2019 until present.
- Was a JavaScript trainee at DCT Academy Bangalore from July 2018 to December 2018
- Groupon as a Customer Service Representative from December 2017 to April 2017.

Project Works

- **Emergency Department:** A vanilla JavaScript and HTML application that uses other inhouse Cerner technologies. This Application is used by the hospital technicians and doctors to keep record of the patient admitted to the emergency ward. Currently working on bug fixes and enhancements**.**

- **Stock Trade:** React Native Firebase Application that provides information to users regarding the current stock prices that they are interested in.

- **Embassy:** React Native Application that provides information about various projects existing and upcoming within the embassy family available for view and purchase.

- **All for Sport Partner Central:** React Project that concentrates on the partner front tied up with Decathlon to host and promote their activities across the country.

- **Channel Core Web:** This project is the core project of the institution I'm currently working in. This project is a framework that is built to support other services in banking and other relevant sectors. Handled the UI front of this web application.

- **Score Sharp:** This is a project that handles providing of loans to the customers online by reviewing their credit history and other documents and information that are required for providing loans. Handled small bug fixes for this project.

- **Customer Onboarding:** This is a project that was built to demonstrate the functionalities of the channel core web framework. This project involves getting the customer onboard by sending a request to open a bank account with the relevant bank after performing particular checks on him/her. Handled the UI front of this web application.

- **Sasol Application:** This is a project that was built to demonstrate the functionalities of the channel core web framework. Worked on the UI front of this web application.

- **Steamy:** Passion Project built during free hours. This allows the user to upload his screen and also view the uploaded videos. Built using different libraries like Redux, Redux thunk, Redux forms, Google OAuth and also used JSON server and RTPS server to serve dummy data and API's to access the JSON.

- **Home Automation App:** Hybrid App built using React Native. This project allows the user to automate the Doors of his property or the workplace.

- **Cab Automation:** This is a full stack project that aims at making the lives of employees working at large organizations simpler by providing solution to the never-ending transportation problems. We have developed a real time product that will maintain the details of the employees their routes and other information. Ultimately, we aim to reduce the waiting time of the employees while boarding and deboarding the cab by providing the required cab details.

- **Clone of E-Commerce store:** Adding different categories, product, user and role management along with security and tokens.

- **URL Shortener:** Reduced URL to short version which is user friendly along with tracking of details such as IP address, browser info, OS, timings.
