## SUMMARY

**+8 years** of experience in developing **Java** applications and **+4 years** of work with **Spring Boot** Framework, has made me a solid backend developer. I had worked at REST API development.

## SKILLS

**Server Administration:** Since 2016 I've switched all my servers to **Docker** and during these years I've learned how to tweak a **Linux** (Debian based and a bit of CentOS) OS and Docker configuration to have a highly available, tuned and hardened web server for different applications and purposes.

**Programming:**Backend: I started coding with Java since 2010 and during the past years I've had a lot of fun with it. I've been using Spring Boot Framework since 2015 and I love it! I'm also familiar with other technologies like micro-service, uploading and Etc. Recently I worked on a national virtual training project called SamaLive at [www.samalive.ir](http://www.samalive.ir), nowadays I'm focusing on Reactive api.

**Frontend:** I use **Angular 8** in my last project, and most of the time jQuery for some front-end tasks and HTML/CSS are also used in some moments in my day to day life.  
And I love react.js very much

**Database:** NoSQL MongoDB is my main choice over all other Databases. Although tweaking Spring Boot Data helps me to use the highest possible power of this great database but I know the limits as well and usually combine it with Redis to build up a trustworthy fast DB storage. Redis is also usually my main choice for cache/session storage and I almost use it in every project that I have been developed during the past 10 years.

**RabbitMQ** play the main role in the queue/worker tasks.

**REST API** is the thing that I've been working on for the past 4 years in Chenar Co. and Samasoft, Inc. We develop a fast and reliable RESTful API for our web/mobile apps.

**Node.js** is my alternative when I need something lighter and faster to work with as a back-end environment. I try to use it as less as possible because I EXPERIENCE like JavaScript too much :-/ sometimes it was the solution and I'm really happy with its results. :)

## EXPERIENCE

Chenar Co. ,Iran

Samasoft Co. ,Iran
