

# VISHNU DEV . C

Backend Developer

## PROFILE SUMMARY

I am a software developer who began my career as a PHP Web Application Developer in 2018. Later I transitioned to product development with Golang, Postgres, Python, and various other backend technologies and started working on both non-docker and docker based projects. Currently I am focusing on Golang based backend development. I am always striving to improve the quality of my work by diving deep into the tasks assigned to me and learning continuously by collaborative working.
