Email:shyammaddi5577@gmail.com

Ph No:9502283108

## OBJECTIVE:

To be associated with a technology oriented progressive and fast growing organization that provides an opportunity to apply my knowledge and skills on challenging project to keep abreast with latest trends and technologies and to work in an innovative and competitive world.

## SUMMARY

- Overall 2.8 years of work experience in IT environment.
- 2+ years of Experience in Robotics Process Automation (RPA) on UiPath Tool.
- Experienced in analyzing Robotics automation development and also being a part of requirement gathering.
- Testing the automated process with different test scenarios using client provided before deploying the process to production environment.
- Configuring new automated processes and objects using core workflow principles that are efficient, well structured, maintainable and easy to understand.
- Feasibility analysis and understanding the business flow.
- Team up with the business leads to understand business process.
- Configured automation processes as per Process Design Document.
- Experience in, Email Automation, Error Handling, Excel, Object Cloning, PDF, String Operations, Web Recorder, Database Connection etc.
- Good knowledge on Object Oriented Programming (OOP) concepts.
- Troubleshoot and debug developed automation interface for bug fixes.

## ACADEMICS:

- **B.Tech** from JNTU-H with **70%** aggregate.
- Intermediate from New Science Junior College.

## PROFESSIONAL SUMMARY:

- Worked with Hyper Thread Solutions as RPA developer from June 2018 to October 2020.
- Working with The Tao Automation Services Private Limited as Associate Consultant-Tech from October 2020 to Till Date

## Certifications

- UiPath – RPA Developer Certified
- Uipath – Advanced Certified
- AA – Advanced and Master Certified Developer

## TECHNICAL SKILLS:

<b>RPA Tools</b>	: UiPath, Automation Anywhere, Robin RPA (Open Source)
<b>Languages</b>	: C#
<b>Databases</b>	: SQL
<b>Web Application</b>	: HTML, CSS
<b>Operating Systems</b>	: Windows (7, 8, 10)

## PROJECTS:

### Project #1

Title	:	SCM Plant Operations
Role	:	RPA Developer
RPA Tool	:	UiPath

#### Description:

The process involves checking Finished Goods planned orders in SAP, converting it into Process order based on the final production plan, perform raw material and packaging material staging process with stores department. Followed by creating batch number for FG production. Once Batch number is created and materials reached production shop floor, physical production will commence, and necessary quality control tests and activities will be performed for the production batch as per company guidelines. During production, various data entries like Setup & Planned downtime, Machine run hours, production bookings/reversals, material consumption, goods movements postings, etc., will be entered into the system. Client use SAP system for all these data entry purposes.

### Project #2

Title	:	CAT and Non-CAT Vendor Reconciliation
Role	:	RPA Developer
RPA Tool	:	UiPath

**Description:**

By using UiPath (RPA tool) it is trying to establish a comprehensive solution for analytics & automation for this process within the Accounts Payable & Receivable function in Finance. Here we compare company and vendor ledgers to create final summary report in excel to their logical conditions and share the output with business team through an email.

**Project #3**

Title : Email Box Monitoring and Reporting for Government Dept.  
Role : RPA Developer  
RPA Tool : UiPath

**Description:**

In this Project we develop a Business process that automates the Client Daily Mail Based on Subject or Attachment or Mail Address or Body. Our Client every day gets lot of mails form different places and persons with attachments, here we segregate each mail attachments in specific folder (if it contains any pdf's bot will convert it to pdf to word using Acrobat Reader) with defined structure and shared with respective departments and giving an output excel it contains Mails Count. It will Uploaded and Download Using Web Service URL.

**Project #4**

Title : Employee Claims Settlement  
Role : RPA Developer  
RPA Tool : UiPath  
Environment : UiPath, JD Edwards, Webpage, Excel, Outlook

**Description:**

UiPath Robot monitors the email to which the data is sent in excel, would extract the information and inputs into ERP Application & Web Application. It also monitors the approvals for creating payment requests in the ERP and it sends out an email notification to the business user.

**Project #5**

Title : Lead Generation  
Role : RPA Developer (Design, Development and Support)  
RPA Tool : UiPath  
Environment : UIPath, LinkedIn.com, website.informer.com, mailtester.com, MySQL, Gmail, Yahoo Mail, Rediffmail

**Description:**

In this Project we developed a Business process that Automate the LinkedIn, Website Informer, Mail tester websites to generate the Leads for the client. In this Project Bot will take the information from database which is inserted into database using user Interface , Bot search in LinkedIn with those details, if data available in LinkedIn Extract the data and store's it in related table in DB, Based on stored data Search for company details in Website Informer site get the owner details and stores it in DB ,then Bot will generate different Mail id's and check that mail id's in Mail Tester website if it available it stores In DB, Another bot will send different newsletters to that particular mail Id's using Gmail, Yahoo Mail and Rediffmail(Like Manual mailing) ,here if we can get any bounce back mails then we remove that mail from DB

**Project #6**

Title : Material Master Creation in SAP  
Role : RPA Developer (Design, Development and Support)  
RPA Tool : UiPath  
Environment : UIPath, SAP, Excel, IBM Lotus Notes

**Description:**

UiPath Robot monitors the email to which the data is sent in excel, would extract the information and converted it into text file & imports into SAP system. It performs sequences of steps and save the data in SAP. It sends out an email notification to the business user.

**Project #7**

Title : Logistics Tracking  
Role : RPA Developer (Design, Development and Support)  
RPA Tool : UiPath  
Environment : UIPath, OneSource app, Orchestrator, web app, SQL, Excel, Outlook

**Description:**

Here two bots working on Logistics controlling and monitoring, one bot will login into their internal application and scrap the all required data based on tracking numbers from different screens and update it into the data base different tables, here database is internally linked to one page web application which will show all the data present in database, from here agents can update or modify the tracking details based on requirement. If any modifications done in web app second bot picks the details and update into their internal application.

## Project #8

Title : Visa Processing  
Role : RPA Developer (Design, Development and Support)  
RPA Tool : UiPath  
Environment : UIPath, My SQL Workbench, Web Application, API Triggers

### **Description:**

In this process user insert the records into Database using Postman, after that bot picks the records from database and login into visa application website to apply the Visa by fill all the required details and then calls an API to send the Visa Application Id. Then bot checks for visa status and update the visa status through API. If Visa is approved then bot downloads and send visa to user.
