## PROJECTS

### WEB AUTOMATION

#### UIPATH

Data is scraped from multiple websites and reports are generated from extracted data as per client requirements. Multiple error handling techniques used like try catch, throw, global exception handler, etc.

### PDF AUTOMATION

#### UIPATH, VB .NET, REGEX

PDF invoice extraction using document understanding framework. This uses REGEX and intelligent form extractor to gather required data from pdf. Values with low confidence scores are sent for human validation after which they are updated in the point-of-sale system and QuickBooks with the help of REST APIs.

### BI DASHBOARD

#### UIPATH, REST API, SQL

Fetches data from multiple sources using REST APIs and converts the Json response into data tables. These tables are further processed and updated to the SQL database every hour (Background process) so that the clients can see real-time data in the BI Dashboard (sisense).
