Project 2

</div>

Client	:	ABB, Switzerland
Project Duration	:	Aug 2015 to till date
Role	:	Salesforce Developer - CLM

Environment:

Apttus for Contract Management, X-Author, Developer Console, Data Loader.

Description:

ABB is one of the world's leading engineering companies, operating mainly in robotics, power and automation technology areas.

ABB-CLM stands for Contract Lifecycle Management, where different phases of a contract between the ABB and their customers will be maintained. ABB will be selling products to their customers. Based on the requirement and before selling the product, a sample agreement (contract) from the customer's account / opportunity object, will be created between the company ABB and their customers. Then it will be sent to the customers for review. While reviewing, the agreement may go under negotiation. After negotiation, the finalized agreement will be sent to the customers for signature. If everything is fine, it will be activated and stored in repository otherwise it will be cancelled. Later, based on the requirement the agreement from repository will be renewed / amended / terminated.

Responsibilities:

- Have a good experience in Contract Management.
- Extensive experience in managing users and security controls.
- Have created different record types and their corresponding page layouts for creation of related agreements.
- Have done code analysis and fix for so many existing Apex classes and made them in compliance with Accenture coding rules.
- Have written SOQL and SOSL queries, created workflow rules and validation rules.
- Since the Apttus managed package does not contain all the features, I have created few Apex classes, Triggers and Visualforce pages for customization.
- Have created test classes for testing purpose.
- As an admin, I created many users with the required access and security.
- Have created approval processes.
- Have experience with Data Loader for bulk data import and export.

Project 1

Client	:	BMW, Germany
Project Duration	:	Oct 2014 to July 2015
Role	:	EDI Application Maintenance

Environment:

Electronic Data Interchange (EDI), Axway Integration Browser, VDA and global message standards, Supply On portal, BMC Remedy tool.

Description:

Material required for producing various automobiles will be provided to BMW by the vendors from different countries. Vendors exchange data with users in production plant electronically following various VDA/global standards. There will be continuous exchange of data regarding the delivery forecast, Advanced Shipping Notification and Orders. Main aim of these EDI applications is to exchange data electronically and have the information beforehand without causing any interruption to production. Tickets will be logged to our group in BMC Remedy by the vendors in case of any interruption in continuous flow/missing data.

Responsibilities:

- Monitored the workflows for various data types in Axway Integration Browser and worked pro-actively minimizing production stoppage.
- Resolve the issues within Service Level Agreements and took necessary actions for repeated incidents by finding the root cause and fixing it by implementing changes.
- Created various Change Requests and conducted post implementation checks after mappings getting deployed to production servers.

Academic Details:

Name Of Examination	Institution Studied	Year Of Passing	Aggregate
B.E (ECE)	C.Abdul Hakeem College of Engg & Tech, Vellore, TN.	2014	80%
HSC	Goodlet Higher Secondary School, Sholinghur, TN.	2010	85.83%
SSLC	Govt. High school, Erumbi, TN.	2008	93.8%
